ENIGMA 2000 NEWSLETTER

Satellite Dish atop the Embassy for the Sultanate of Oman in London 167 Queens Gate SW7

Bearing 225 deg approx

Issue 34 May 2006 http://groups.yahoo.com/group/enigma2000

Before we go into the newsletter proper PLondon must apologise for the email trace information and Army service number that inadvertantly appeared on the back cover of Issue 33. It referred to repeated harassment against a female made via the MoD email system; the matter placed in the hands of civilian police who issued a Harrassment Order against the perpetrator. Again, apologies for the accidental inclusion of this detail.

ASSISTANCE REQUESTED on this FCO Clandestine Communications and Propaganda Radio site:

It is believed that <u>Rendcomb</u>, 5 miles north of Cirencester in Gloucestershire was a wartime FCO Clandestine Communications and Propaganda Radio site.(may not have been used since late 1940's or early 1950's). There is little detail available about the use of this site and whilst we have ascertained there was an airstip there, little else can be uncovered.

It has been mentioned to us that apart from propaganda the base [if it existed] was also used as a DWS site. We would be pleased to receive any thoughts/information on this past site via g7vak@yahoo.co.uk or direct to Paul at his home address [See QRZ or Monitoring Monthly: Feb, Mar, or May 06].

ASSISTANCE REQUESTED by ENIGMA 2000 Member ACy

I am interested in Chapman Pincher's article appeared in the Daily Express on 12. January about Sonia, the well known russian agent first in China, then in Switzerland as the resident of the pre-war spy network, which later grown in to the Rote Drei during the 2nd WW

We would be pleased to receive any scans of this piece OR OTHER INFO ON SONIA via g7vak@yahoo.co.uk

Once again, welcome all to Issue 34.

Our regular contributor base continues to grow with all our "Desks" & "Teams" gaining new members willing to assist in their running. We are now receiving so very many logs that with this volume it is not possible to include all individually within the Newsletter. Our aim is to try to create / prove schedules with confirmed observations, and print those logs necessary to substantiate those schedules, or allow the reader to construct their own versions from our text.

Please continue to send your logs, which are retained for further reference by E2k, even if not actually included verbatim in any of our publications. Putting together a Newsletter of this complexity is very time consuming and readers will be interested to learn that PLondon has received several comments of 'information overload'; one such comment being made by a professional Signals Officer of good standing. [How else could we provide the service our members expect. Ed]

As a direct result of more people becoming actively involved in E2k ALL members are receiving the benefit of our ability to provide :-Extended coverage and more detailed comment of almost all stations

Specialist desks acquiring extra detailed info and then using it to produce usage / prediction charts which are more accurate than any previously available, which in turn generates even more loggings.

Do not forget that considerable information resources are provided on our group site, including:-Slavic Tracker Charts Morse Station Profiles Language Lists Abbreviations Hitch Hikers Guide

The Newsletters themselves are a reference work which is often overlooked, all back issues are available, and they probably give the answers to 99% of questions asked about number stations. You even have them indexed for you thanks to "mndbs"

This May issue, annually, is an important one as the effects on schedules / freqs of the "Summer" time changes are becoming more fully understood and the station details updated as necessary.

As these changes are not date consistent, many on 25 Mar with others on 1 Apl and 1 May it gives us a further opportunity to study possible origin/target implications for those stations who do not change to suit "local time" but remain on GMT. M12 & E07 have provided some interesting timing anomalies.

Slavic Stations, M10, S10d, S17c have undergone their expected rotational freq changes from 1 May, refer to Chart 20 in Newsletter 20.

S11b, new designator is assigned, see entry, format is as E11b - please add to your Control Lists.

Now was **E10** playing with E2k with its **"goodnight"** TX, following our ongoing detailed analysis, or was it pure coincidence – guess we'll never know, but they certainly have a sense of humour. Very nice catch by Jakub in the Czech Rep, see later.

Also more E10a "Strings" during Apl.

Improving conditions and rising SSN's at end of Mar resulted in more M08a & V02a being heard on the East side of the "pond" although unfortunately this did not continue into Apl.

Morse is dead ?, article in last issue.

Some interesting comments received from Anon members following our article have included the information that such was the effectiveness of the Iraqi jamming stations & their operators during the "run up" to 1st Gulf war that the Allies had to hurriedly resort to using CW, and find suitably trained operators, to ensure reliable communications. Ho Hum !

Group Officers
Please add to the list : PoSW General Station Analysis & Additional Media Coverage

MORSE STATIONS

Here is a "small" representative sample of the very many CW logs received, giving an indication of station behaviour and range of times / freqs heard.

The presentation layout has been revised, following constructive comments, to make it easier to "speed read".

Unids

IB has logged a larger number than usual of very short duration / short lived TX's, mainly under 5 meg, sending only an alpha/numeric ID, whose origin and purpose remain unknown.

(Possibly associated with current Russ Mil exercises and/or training for their upcoming African deployment. Ed)

10343/9164/7849kHz

28 Mar

See also the E2k German Report.

This stations behaviour is quite odd and creating some interesting challenges for our CW team.

There is a suspicion that their TX'er may also be emitting "image freqs" but this has yet to be proved.

Thanks to CX & FN who are specialising in monitoring this station, many more skeds are being identified which is allowing us to build a far more complete picture of the activities and sked structures of this prolific CW player – even though it's continually changing.

It had long been thought that many skeds were not being heard, too weak, in UK, but could be monitored from other parts of Europe.

The best previous "score" had been 19 skeds a day - this has now risen to over 30, confirming our original thoughts.

As a result of CXs postings many of these skeds are now being monitored in UK, and elsewhere, by the CW team.

Many of the mssgs are in the 100+ gps area while on 26 Apl RNGB caught a 311 gp mssg which caused the whole rpt sked to run late, and the freqs were ID related !!, while Fritz N caught similar situations on both 21st & 26th, and CX on 16th caught a 325 gps.

A further interesting aspect to come to light is the slight, but noticeable, delay between groups 40 / 41 of some messages.

Whether this is as a result of computer generation/ sending, or having another meaning, is currently unknown.

[But it is a regular feature of many Local Broadcast music stations who programme onto HD's to have periodic "hiccups" while waiting for the HD to "refill the buffer", even heard it on national radio. Ed]

We wonder if this TX ties up with the 06.00z sending found on 2nd Apl to give a new 06.00/20/40 z sked?

Resulting from the increase in M12 monitoring activity other patterns are also more clearly emerging, but still needs much more work, in that on some skeds there appears to be a distinct relationship between various aspects of the 3 sked freqs, but these are not always related to the mssg ID. These relationships have been known about by E2k for a number of years but the lack of sufficient comprehensive logs made any serious analysis difficult, this situation is now changing.

Report from the German Branch, ably managed by Jochen: Much stuff! – Report from E2K's German Branch

Hallo liebe Freunde und Kollegen der deutschen Branche (Hello dear friends and colleagues of the German Branch)

Since March 2006, the German Branch exists 2 years, and it goes on growing up. We have now up to 20 people, who more or less report about their logs and numbers related events in Germany. One of these people, Fritz Nusser, comes from Switzerland (FritzE2Kch) and came in early 2005 to our Branch. Since then, he regularly brings his logs section, which usually contains Morse stations, but not only these ones, as his logs in this report will show. For a fiew periods, monitoring of Morse stations becomes more and more "in" in our Branch. Since February this year, we have a specialist for M12, who also regularly reports about his findings. Also he (CapitaneXE2Kde, near Dresden/Eastern Germany) doesn't only monitor M12, he also analyzes them, as our "Beginner's corner", written by him, will show below.

This time there is MUCH to report, so also much stress for the "Kopf", for whom it's difficult to decide, where he shall begin. So I decided to do it chronologically in event order, and between the events you'll find the logs, starting with the above mentioned "Beginner's corner" by CapitaneXE2Kde.

ENIGMA meeting

Unfortunately, the ENIGMA meeting, which I mentioned in the last report, and which was dated for March 4th, failed, because of heavy snow problems in that days, so that it was quite impossible for people, who wanted to come by car, to take the way to Marburg. Only one guy, FrankE2Kde from Germany's capitol Berlin, which lies VERY far away from Marburg/West Germany, took the way by car, and for him it was not as problematical as for others, for example HFD from Trier/Southwestern Germany, where the snow came very wild, so that it was to riskful for him. Many thanks to FrankE2Kde, that he came to Marburg. We had a nice talk about numbers related facts. We will repeat this inofficial German ENIGMA meeting in Marburg in May or June this year, when the wheather will be better. I am still convinced, that we will give many good impulses to the whole ENIGMA2000 group! In the next weeks, I will inform many German hobbyfriends again to make a new date suggestion for our ENIGMA meeting. – After Frank was here, he sent me his February/March logs, which you can find directly after the now coming

Beginner's corner

Here is our M12 analyst CapitaneXE2Kde, near Dresden/Eastern Germany, with a range-search list for M12:

I analysed all known M12-Frequencies and examined in which Frequency part they appear and and to which Radio Service this Frequency is allocated.

But maybe this is also valid to other E2K-ID's.

A Online Database of the Frequencies and allocated Services is at: http://www.efis.dk

M12 Frequencies appear 99 % in Frequency-Bands which are allocated to:

FIXED RADIO SERVICE LAND, MOBILE RADIO SERVICE (except AERONAUTICAL MOBILE) BROADCASTING SERVICE AERONAUTICAL MOBILE (OR – Off Route [like Shannon and RAF Volmet])

but they do not appear at Ranges which are allocated to:

MARITIME MOBILE AERONOTICAL MOBILE (R – Route) AMATEUR RADIO

To speed up searches for missings Skeds it makes not much sense to search in these Ranges.

M12 Search Ranges

| 2000.0 - 2160.0 | 7300.0 - 8195.0 |

E06/07

E06 was monitored on March 26th at 1830 on 6860 kHz in USB with a 0-msg for "690" by CapitaneXE2Kde, then twice on April 12nd by KopfE2Kde, first at 1400 on 13415 kHz with a msg for "160", second one hour later on 11125 kHz (repeat). – E07 at 1700 (same day, same "observer") on 12123 kHz with a 48 group msg for "171". E07's 1940 sked on 6939 kHz on March 2nd can be confirmed by CapitaneXE2Kde, also on March 19th at 1846 on 7697 kHz in AM "..... 93690 000 000" by the same observer.

E10: Analysis, test transmissions, 4-letter-calls, strings, "Good night"

In this period, the E10 analysis was made less active than the last "euphorical" period January/February in the German Branch. 2 analyzers (AlphaE2Kde, Erfurt/Eastern Germany, and KopfE2Kde) did their job sporadically. Maybe, AlphaE2Kde made an updated version of his excellent analysis for the newsletter, but I don't know about it. Via group, he only reported in early March about the usual skeds, especially "PCD" on 4270 at 1930. Both analyzers could monitor, that this special sked more often changed the msgs than in January/February, and that some letter groups are similar to the groups, which were sent before. Also we could find out, that some letters are used more often than others, a fact, which remembers me to the former G04 station, where also special figures were used more often. - But again, there were sent long running msgs, especially one msg was monitored on April 13th, 2030, on 4461 "FTJ" freq, which was first logged in summer last year long regularly or unregularly. On April 18th, DanielE2Kde, Münster/NorthWestern Germany, found a new "FTJ" msg of 44 groups, beginning with "ABAAW" at 2300 on 4460 kHz.

On March 18th, KopfE2Kde could find 2 test transmissions: "ULX1" at 1630 on 4880 kHz and "PCD1" at 1900 on 4270 kHz.

The popular call "FDUM" on 4418 kHz could be found on March 31st at 1846 by FritzE2Kch in Zürich and on April 12th (USB) at 2000 by KopfE2Kde. On March 28th, FritzE2Kch also found the call "HNCX" on 6575 kHz between 1540 and 1544.

The following strings can be confirmed by Germany (Kopf): "MIW A10B11C10" (March 6th, 5230 kHz, nearly at 2000, weak and in USB), "VLB A1Z2B8Z2" (March 19th in USB at 2102 on both freqs – 5170 stronger than 3360), "SYN A1ZZ2B132" (one day later, in the evening hours, on 4648 kHz strong and clear, on 3640 kHz weaker, both in USB). The "GOOD NIGHT" string on March 14th can be confirmed by AlphaE2Kde and KopfE2Kde; more about this special string you can find in the newsletter. FritzE2Kch found the string "MIW A46Z2215B65Z2100" on April 24th at 1845 on 5230 kHz. Some members of the E2K group think, that some strings, which are sent, contain real schedules, like the last string I mentioned. It could mean for example: "You can expect something interesting: 1. on June 4th at 2215Z and 2. on May 6th at 2100Z". Although this really something interesting on the air.

G06

The 1900 sked on 8055 kHz was heard on April 4th by CapitaneXE2Kde with a msg for "308".

S06

It was heard 2 times by the German Branch: on March 14th at 0810 on 10420 kHz (female) with a msg for "352" by KopfE2Kde and on April 14th at 1500 on 11125 kHz by FritzE2Kch.

S21

It was monitored by DanielE2Kde, Münster/Northwestern Germany, on April 25th at 1847 (in progress) on 4855 kHz with a 32 group msg.

XM "Whales"

The so called "techno" sound can be confirmed by KopfE2Kde, as he heard the same sound on one evening in the late March in the 4-5 mHz range, where it appeared on several freqs quickly after another. - XM was also monitored by DanielE2Kde, Münster/Northwestern Germany, on April 17th at 1638 in SSB on 8708 kHz.

X06

Also this time we have X06 transmissions to report, but most of them were monitored by people out of the German Branch: Richard Ness (RNGB) and Akin from the Conet Project (Akin). Only two come from the German Branch (Daniel and Kopf). Here the X06 stations come in transmission order: 01.03.06: X06 at 1356 till 1359 on 10814 kHz in USB - scale: 412356 (RNGB). Two X06 on 18.03.06 at nearly 1900: 1. 1900 till 1907 on 8131 kHz - scale: 164532 (RNGB), 2. 10193 kHz (no more details) (Akin). 03.04.06: 1602 on 9160 kHz in USB - scale: 532614 (RNGB). 04.04.06: 0808 on 11462 kHz in USB - scale: 165423 (RNGB). 05.04.06: 2200 on 5831 kHz - scale: 164532 (RNGB). 10.04.06: 1915 till 1918 on 6962 kHz in USB - scale: 164532 (RNGB). 17.04.06: 1605 on 14392 kHz with a very strong S9+20 - scale: 532614 (rare sequence) (Daniel). 18.04.06: 2000 on 9067/11501 kHz with two sequences, which sound very similar - scales: 256134 on 9067, 156234 on 11501 kHz (RNGB). 24.04.06: 1000 till 1031 on 10372 with a fair S5 - scale: 431625 (rare sequence). After the signal's stop, the carrier stayed on half a minute, then nothing further heard (Kopf). On the same day 2 other transmissions in the evening (both monitored again by RNGB): 1. 1904 till 1906 on 12195 scale: 314265 (quite weak), 2. 1904 till 1907 on the popular X06 freq 13506 with the scale: 164532. 28.04.06: 0706 till 0709 on 12091 kHz - scale: 216354 (rare sequence) (RNGB). - Note, that X06 was monitored more frequently in April, and that the scale "164532" was four times on the air in both two months (one time in March and three times in April) - very interesting. It's also interesting, that the freqs of the first "164532" transmissions, which came on March 18th and April 5th, ended with "31". It's also worth to mention, that in April there came some rare sequences, which were not only monitored by Kopf (and RNGB via Kopf), but also by others, who come from out of Germany, as this newsletter will show us. It's great, that the tone scale is also used by some of them, cause it's an easy way to analyze the X06 transmissions. I would be very glad, if PoSW, who also is a very busy X06 monitor, would use this easy 6-tone scale in future. - Many thanks to RNGB, my busiest X06 assistant, Akin and DanielE2Kde for their logs.

XPA

On March It was heard by KopfE2Kde, who heard the 3rd morning sked on March 14th at 0640 on 13523 kHz – as usual with S9+20. Exactly one month later, on Friday, April 14th, KopfE2Kde all three motning skeds and can confirm the break during the 3rd one.

Morse stations

DanielE2Kde heard M01 on March 21st at 2010 on 5020 kHz in CW. Further he writes: "ICW, probably machine sent, speed about 15 wpm, 5fg (i.e.: groups repeated), short zeros. Caught the transmission in progress and recorded until ending at 2011z (5FG groups noted below without repeat): 85143 56018 98053 43643 23918 78952 17190 = 774 774 30 30 0 0 0". Daniel couldn't ID the station. Thanks to GD, who found out, that it was one of the regular M01 transmissions (hand sent). – CapitaneXE2Kde, our M12 specialist, could also find M01B on April 17th at 2010 on 5336 kHz. – DanielE2Kde also found M10(?) on April 17th at 1632 (in progress) on 5077 kHz in CW. To this station he further writes: "MCW, short zeros, ca. 12 wpm, repeating a sequence over and over again: '31 275 275 275 39 049 049 049 27 435 435 435 32 555 555 571 571 571 '; strong S9+20''. – M12 was not only found by our specialist CapitaneXE2Kde, but also twice by DanielE2Kde: 1. on April 19th at 1724 (i. p.) on 10598 kHz in CW. He writes: ".... extremely strong signal S9+40, ca. 18 wpm ICW, 5fg, short zeros, ending '0 0 0 0 0'. CL at 1730z. Signal was so strong and clear, that I could read the 5fg directly from the 'Audacity' (recording software) screen". 2. on April 23th at 1925 (i. p.) on 11565 kHz in CW. To this station he writes: "ICW, 5fg, short zeros, strong QSB, ending 1931z '000 000'''. - M23 on April 17th at 1635 on 5670 kHz also in CW and also monitored by DanielE2Kde also found M24 on April 18th, 1830, on 10710 kHz.

Article in "Financial Times Germany": "Spying made easy"

On April 7th, this article appeared in the weekend edition of the German "Financial Times" newspaper. It was made by Kristina Allgöwer. For this article also KopfE2Kde was interviewed, who informed Paul Beaumont, who gave also an interview. Unfortunately, Paul's statements are not published in the article, [*in précis only*] but ENIGMA2000 is mentioned there. I think, this time it was made right, that only Paul, the E2K moderator, was informed and gave an interview for E2K. This procedure will be continued. If some others want an interview by me [Kopf], I will only inform Paul about it. My interview with FTD was also the reason for me to come in personal contact with Paul via telephone, cause he left me his phone number to give it to Miss Allgöwer. – In her article, she didn't only write about numbers station monitors, but also about planespotters and spy-sat trackers. The whole article you can also find online. In German at

www.financial-times.de/politik/deutschland/63324.html

In English in the 'Files' section of E2K. During my interview with Miss Allgöwer, I asked her for permission to translate this article for E2K, which was made by Gary Hagermann, Bristol. Thanks dear friend – also for your good statements about our German Branch, which you expressed via E2K group.

Historical book about the BND

On April 11st, CarlozE2Kde, Saarlouis/Southwestern Germany, reported via group about a historical book about the BND, which you can find at www.bnd-standortpullach.de

The author, Andreas Magdanz, created a photo project, which deals with the history of the BND for more than 40 years. The title "The BND – QTH Pullach – a historical review over 40 years of the BND". After Carloz informed us, I mailed to Mr. Magdanz, if he also mentions numbers stations of the BND in his book, but he answered, that he can't say anything about this. Because of this reaction, which came soon after my request, some of us speculated, if Mr. Magdanz is a member of the BND staff or not.

That was the long German Branch report for E2K NL 34. Hopefully, we can report about the inofficial German ENIGMA meeting in the next edition. Till then "Auf Wiederhören" and "good bye" Jochen Schäfer, manager [Kopf] E2K German Branch

VOICE STATIONS

E03/E03a

Apart from the regulations concerning the reception of wireless stations within Great Britain advice on reporting intelligence matters also exists in the form of DA notices.

Whoever the messages, from E03/E03a, are aimed at ENIGMA 2000 has no wish to 'advertise' the existence of these stations to those who may not support the best interests of Great Britain, or its representatives abroad. Although we are unable to stop discussion of E03/E03a, ENIGMA 2000 will remain aloof from any such discussion and will not be including reports or analysis on E03/E03a.

PoSW provides detail to schedule and intercepts:

Sunday 1830 + 1930 UTC Schedule, always has call "690";-

5-Mar-06;- 1830 UTC, 6,860 KHz, calling "690" for a full message transmision, DK/GC "428 428 111 111", "52342 06251 82640 29231.....", S9+ signal, lower sideband well suppressed, really good modulation with deep audio. Carrier with tone was up 1823z.

1930 UTC, 5,405 KHz, second sending, strong signal - and the same two frequencies were used in March last year.

6-Mar-06, Monday;- 1930 UTC, 5,405 KHz, next day repeat of yesterday's full message, second sending, forgot to listen for the first! Strong signal but QRM from 2-way SSB traffic 2KHz lower which was more interesting than E06. English language, British accent OM voices, sounded like RAF air interception excercise of the type that was often heard during the Cold War years, hadn't realised that this kind of thing was still going on - or is Ivan still sending those bloody great four engine turbo-prop recon. aeroplanes to intrude British airspace and test the response of our airforce? Very strong base station with much weaker stations replying, presumably airborne, mention of speeds, course headings etc.

RNGB

RNGB

12-Mar-06;- 1830 UTC, 6,860 KHz and 1930 UTC, 5,405 KHz;- "690 690 690 00000"

19-Mar-06; 1830 UTC, 6,860 KHz, "690 690 690 0000", signal strength peaking S9, lower sideband well suppressed. 26-Mar-06; 1830 UTC, 6,860 KHz, "690 690 690 0000", very strong, S9+ signal with lower sideband well suppressed and deep

modulation - E07 please take note and copy! First day of British Summertime, hooray! As expected has stayed on UTC and so turns up one hour later local time.

1930 UTC, 5,417 KHz - previous loggings have been on 5,405 KHz - second sending.

2-Apr-06;- 1830 UTC, 8,020 KHz, "690 690 690 00000", strong signal, lower sideband well suppressed. Second sending 1930 UTC, 6,970 KHz, close to Hebrew language broadcaster on 6.973. Continues to use same or very close frequencies as in same month in 2005. 9-Apr-06;- 1830 UTC, 8,020 KHz, "690 690 690 00000".

16-Apr-06;- 1830 UTC, 8,020 KHz and 1930 UTC, 6,970 KHz with BC QRM, "690 690 690 00000", not much trade for poor old "690" these days!

First + Third Wednesday in the Month Schedule;-

1-Mar-06;- 2100 UTC, 7,840 KHz, "569 569 569 00000", very strong signal, lower sideband well suppressed. Carrier found up at 2041 UTC, tone at 2047z and a single spoken "569" 2049z.

2200 UTC, 6,830 KHz, "569 569 569 00000", second sending, S9+, lower sideband well suppressed.

15-Mar-06 - third Wednesday in the month - 2100 UTC, 7,840 KHz, calling "569" for a full message, DK/GC "127 127 82 82", "97731 73335 92972 04409.....".

2200 UTC, 6,830 UTC, "569" and "127 127 82 82", second sending, noisy frequency but E06 generally over-riding the QRM. 16-Mar-06, Thursday;- 2200 UTC, 6,830 KHz, second sending of the "next day" repeat of yesterday's full message.

5-Apr-06;- first Wednesday in April but I could find no sign of this schedule despite a lot of searching at both 2100 and 2200 UTC. By way of compensation there was another E06 heard just after 2005z, see below.

19-Apr-06;- 2100 UTC, 9,310 KHz, I don't know why I couldn't find this schedule on the 5th but there was no problem today, carrier noted 2054z. Calling "983", DK/GC "257 257 139 139", strong signal. "98496 00851 75136 58334 92508.....'

2200 UTC, 7,560 KHz, second sending, S9 signal, slight sideband splash QRM from a broadcast station on the LF side. 20-Apr-06, Thursday;- 2100 UTC, 9,310 KHz and 2200 UTC, 7,560 KHz, the next day repeats of "983", even stronger than yesterday, both S9+.

First + Third Fridays in the Month Schedule;-

3-Mar-06;- 2130 UTC, 5,197 KHz, calling "634" for a full message transmission, DK/GC "473 473 34 34", "82022 43561 15467 86324.....", signal strength S7-S8, lower sideband well suppressed. Ended after 2141z with DKDK GCGC and 5 x well spaced "zero". Was on in the region of 4,760 KHz in Jan. and Feb. and in Dec. 2005 Never managed to find another sending for this one, perhaps split between two days like the related Thursday 1830z and Friday 1930z G06 German YL. 17-Mar-06;- 2130 UTC, 5,197 KHz, "634" and "473 473 34 34", as on the 3rd.

7-Apr-06;- 2130 UTC, 5,197 KHz, call "634" - same frequency and call as in March - DK/GC "580 580 32 32", strong signal, lower sideband well suppressed, "45918 33672 48214 54419......". Carrier was up when checked almost half an hour earlier at 2101z. Ended 2140z with DKDK GCGC and five spaced, slow "zero". Stays on UTC so now on at 10.30 PM instead of 9.30 in the winter months.

21-Apr-06;- 2130 and 25 seconds UTC, started late, 5,197 KHz, "634" and "580 580 32 32", same as when heard on the 7th. Was warming up at 2110 UTC - and was playing music! Modern club/dance type, vocals appeared to be in Russian although one track was in English. Similar kind of thing was noted with the related G06 German transmission on 10-February, also a Friday.

Other E06;-

22-Mar-06, Wednesday;- 2107 UTC, 6,910 KHz, E06 in progress with full message. Ended 2119z with "293 293 86 86" and 5 normal "zero". Not part of the known first + third Wednesday schedule, today is the fourth Wednesday in the month. Was not found on the following day so may be the "next day repeat" of a Tuesday transmission.

23-Mar-06, Thursday;- 2100 UTC, 6,780 KHz and again, 2200 UTC, 5,350 KHz, "502 502 502 00000", not the E06 heard yesterday.

5-Apr-06, Wednesday;- 2005 UTC, 9,260 KHz - unable to find the expected first Wednesday 2100 + 2200z schedule, but this was found earlier with a full message in progress, weak signal for an E06, S3 to S4 only, propagation not too good this evening. Ended 2009z with "956 956 28 28 00000", short message, must have started on the hour. Could not find on the following day so may itself have been the "next day repeat" of a Tuesday transmission.

6-Apr-06, Thursday; 2035 UTC, 5,186 KHz, transmission in progress, close to a strong carrier, ended after 2040z with "270 270 35 35" and 5 x spaced, slow "zero" - just like the E06 heard on the first and third Fridays at 2130z. So I assumed that this was connected with the Friday transmission but it wasn't, the E06 on the 7th had a different 5F message.

20-Apr-06, Thursday:- 2030 UTC - and 30 seconds or so, started well after the half hour - 5,186 KHz, calling "891", DK/GC "270 270 35 35", same as when heard on the 6th. "27819 45681 19745 91081......". Difficult copy in AM mode due to a strong "XJT" which has taken up residence close to this frequency, was not there on the 6th, much better copy with the receiver in USB. Ended with slow zeroes. Looks like a first and third Thursdays in the month schedule. [Tnx PoSW]

E07

Before we move onto others logs PoSW shares his logs and analysis of the station:

The usual E07 schedules continue as we move into spring with all the usual well documented problems of low modulation making for difficult copy; but in March two new E07 schedules were noted, on Tuesdays at 1900 UTC and on Thursdays, also at 1900 UTC. These were of a much more businesslike nature than the long standing transmissions with much better modulation than your average E07 and transmitted in lower sideband suppressed mode, not noted before with this one having up until now always used conventional AM with both sidebands.

Sunday + Wednesday 1800 UTC Schedule;-

5-Mar-06, Sunday;- 1800 UTC, 9,923 KHz, "906 906 906 000", first sending, inside 31 metre broadcast band, difficult copy. 1820 UTC, 9,064 KHz, "906", second sending, better mod. and clear of broadcasters, much better than the first sending. Same frequencies as in March 2005, third sending in event of "full message" should be 7,697 KHz. 12-Mar-06, Sunday;- 1800 UTC, 9,923 KHz, "906 906 906 1", DK/GC "658 43" x 2, difficult copy due to low mod. and BC QRM.

1820 UTC, 9,068 KHz, second sending, again difficult to hear and a strong "XJT" has taken up residence slightly HF.

1840 UTC, 7,697 KHz as expected, third sending, difficult to hear due to low mod.

15-Mar-06, Wednesday;- 1800 UTC, 9,923 KHz, first sending with very low mod., unreadable.

1820 UTC, 9,068 KHz, second sending with much better mod. than the first, "906 906 906 1", DK/GC "658 43" x 2, same as on Sunday.

1840 UTC, 7,697 KHz, third sending, back to low mod. but readable.

19-Mar-06, Sunday;- 1800 UTC, 9,923 KHz, "906" and "658 43", same as on Sunday, repeated 1820 UTC, 9,068 KHz and 1840 UTC, 7,697 KHz, all with low mod.

26-Mar-06, Sunday;- first day of Summertime, the clocks having gone forward by one hour. This schedule has stayed on UTC - for the time being - and has therefore appeared one hour later clock time;- 1800 UTC, 7 PM BST, 9,923 KHz, "906 906 906 1", DK/GC "314 40" x 2, strong signal with much better mod. than usual. Usual repeats also with better than usual modulation.

2-Apr-06, Sunday;- 1700 UTC, 12,123 KHz - with the first appearance in April has now shifted by one hour UTC which brings it back to a 6 PM start-up as in the winter months. "171 171 171 1", DK/GC "697 89" x 2, mod low but readable.

1720 UTC, 10,703 KHz, second sending of "171" and "697 89". Same frequencies were used in April last year; I only logged this with "000 000" in 2005 so no third frequency. However, RNGB copied a "full message" and on Page 15 of E2K28 reports 8,123 KHz as the third frequency;-

1740 UTC, 8,123 KHz, third sending, S9+ signal and much better mod. than the first two.

5-Apr-06, Wednesday;- 1740 UTC, 8,123 KHz, third sending, "171" and "697 89", as on Sunday.

16-Apr-06, Sunday;- 1700 UTC, 12,123 KHz, "171 171 171 000", mod. better than usual.

1720 UTC, 10,703 KHz, mod much lower than first sending

Monday + Wednesday 2100 UTC Schedule;-

8-Mar-06, Wednesday;- 2120 UTC, E07 with strong carrier but very low audio, extremely difficult copy, "892 892 000", sideband splash from BC station on 6,973.

Mar-06, Wednesday;- 2120 UTC, 6,968 KHz, "892 892 892 000", second sending, not the same frequencies used in March last year which were 9,420 + 8,185 + 6,817 KHz, call "418".

20-Mar-06, Monday:- 2100 UTC, 7,874 KHz, sounds like the first sending, very low mod, voice almost inaudible.

2120 UTC, 6,968 KHz, second sending, again very low mod, unreadable.

2140 UTC, 5,253 KHz, presumably the third sending, unable to hear any voice, went off just after 2148z.

22-Mar-06, Wednesday;- 2120 UTC, 6,968 KHz, "892 892 892 1", DK/GC "541 55" x 2, mod better than earlier in the month. Second sending but couldn't find the first presumed to be 7,874 when checked a bit after 2100z.

2140 UTC, 5,253 KHz, started approx. 20 seconds early, "892" and "541 55", mod. low but readable, much better than when heard on Monday

27-Mar-06, Monday; 2100 UTC, 7,874 KHz - and this schedule has stayed on UTC for the time being and has appeared at 10 PM BST. "892 892 892 1", DK/GC "541 55" x 2, as on Wednesday. Repeated 2120z, 6,968 KHz and 2140z, 5,253 KHz, all with better than usual mod.

3-Apr-06, Monday;- 2020 UTC, 9,069 KHz, second sending, has now shifted by one hour which brings it back to a 9 PM start-up, UK time. "105 105 105 1", DK/GC "541 55" x 2, S9 signal, mod. a bit better than usual. Unable to confirm third sending, signal of some kind on 7,519 KHz probably E07 but was flattened by a strong DRM broadcaster. Not the same frequencies as in April last year which were 13,922 + 12,217 + 11,028 KHz, call "920".

12-Apr-06, Wednesday;- 2000 UTC, 10,128 KHz, "105 105 1", DK/GC "729 39" x 2, strong signal, mod much better than usual, "94916 44754 28537 83075.....". First sending inside 30 metre amateur band, close to a CW QSO between SM3 and OK2 stations. 2020 UTC, 9,069 KHz, second sending, third sending confirmed as 7,519 KHz, readable through DRM signal thanks to better than usual mod.

Thursday 2110 UTC Schedule;-

2-Mar-06;- 2110 UTC, 7,614 KHz, "163 163 163 000", strong carrier, mod. low but readable.

2130 UTC, 5,763 KHz, second sending, very low audio, could just make out "zero". Same frequencies used in March of previous years, third frequency in event of "full message" should be 4,633 KHz.

9-Mar-06;- 2110 UTC, 7,614 KHz and 2130 UTC, 5,763 KHz, "163 163 163 000", strong signals with better than usual modulation. 16-Mar-06;- 2110 UTC, 7,614 KHz, "163 163 163 1", DK/GC "480 44" x 2, mod low but readable.

2134 UTC, 5,763 KHz, second sending in progress, low mod. 2150 UTC, 4,633 KHz, "163" and "480 44", third sending, low mod., difficult copy.

23-Mar-06;- 2110 UTC, 7,614 KHz, first sending unreadable due to low mod.

2130 UTC, 5,763 KHz, "163 163 163 1", DK/GC "480 44" x 2 - same as last week - low mod. but much better than the first sending. 2150 UTC, 4,633 KHz, third sending, mod low but readable.

30-Mar-06;- 2110 UTC, 7,614 KHz, following the start of Summertime has stayed on UTC for the time being and appears one hour later local time."163 163 163 000", repeated 2130 UTC, 10.30 PM BST, 5,763 KHz, both with low mod.

6-Apr-06;- 2010 UTC, in April has now shifted by one hour which brings the startup time back to 9.10 PM, 11,064 KHz, "674 674 674 1", DK/GC "127 42" x 2, usual low mod.

2030 UTC, 9,277 KHz, second sending, S9 carrier but low mod.

2050 UTC, 8,142 KHz, "674" and "127 42", third sending, mod. lowest of the three sendings.

Same frequencies used in April of previous years.

13-Apr-06;- 2014 UTC, 11,064 KHz, first sending in progress, better than usual mod., ended "000 000" just before 2017z. 2030 UTC, 9,277 KHz, "674 674 674 1", DK/GC "127 42" x 2, same as last week, strong signal with better than usual mod, third sending 2050 UTC, 8,142 KHz, S9+ with better than usual mod.

Two new E07 skeds noted in March;-

Tuesday Schedule:-

7-Mar-06;- 1905 UTC, 10,324 KHz, nearly fell off my chair when I came across the E07 OM in progress on a Tuesday, very strong signal, the modulation much better than any other E07 heard in a long time.

A quick check showed that this was being transmitted in the lower sideband suppressed mode, never observed before with E07, has always been standard AM with both sidebands. Ended with "000 000" 1908z.

1920 UTC, 9,146 KHz, the new schedule starting up with "346 346 1", DK/GC "261 69" x 2. Strong signal, deep mod, perhaps slightly distorted, lower sideband well suppressed. In the background there was the distinct sound of M12 CW, the "462" call-up which was at that time in progress on 6,856 KHz although it is difficult to see how a keyed carrier CW transmission could produce an audible note on another frequency even if some kind of interaction was taking place due to the two transmitters being located on the same site.

1940 UTC, 7,864 KHz, third sending, strong signal with deep mod. and again M12 "462" morse could be heard faintly, was on 5,788 KHz at that time.

14-Mar-06;- 1900 UTC, 10,324 KHz - last week's transmission not just a "one off", then, "346 346 346 1", DK/GC "876 37" x 2, "86928 86736 64249 19439.....", good mod, lower sideband suppresed, short message, all done soon after 1905z. Repeated 1920z, 9,146 KHz and 1940z, 7,864 KHz. All three sendings considerably weaker than last week. 21-Mar-06;- 1900 UTC, 10,324 KHz, "346 346 346 1", DK/GC "2411 71" x 2. Repeats on 9,146 and 7,864. All three sendings started

21-Mar-06;- 1900 UTC, 10,324 KHz, "346 346 346 1", DK/GC "2411 71" x 2. Repeats on 9,146 and 7,864. All three sendings started 15 seconds early. Lower sideband well suppressed, deep modulation, slightly distorted at times, "84049 59944 47724 30479 64737....".

28-Mar-06;- 1800 UTC, 10,324 KHz - this schedule has moved by one hour with the "Spring Forward" change of the clocks for summertime so it still starts at 7 PM in the UK. All the long-standing E07s stayed on UTC after summertime started on the last weekend in March so they appeared an hour later clock time and did not compensate for BST until the first week of April. "346 346 346 1", DK/GC "2439 65" x 2. Usual repeats 1820z 9,146 KHz and 1840z, 7,864 KHz.

This schedule seems to have vanished in April, forgot to listen for it on the 4th and could find no sign of it on the 11th

New Thursday Schedule;-

9-Mar-06;- 1944 UTC, 6,939 KHz, strong E07 in progress, lower sideband suppressed as with the Tuesday schedule, ended "000 000" just before 1948z. Presumably the third sending of a schedule which would have started at 1900z.

16-Mar-06;- 1900 UTC, 9,061 KHz - first sending of the schedule noted last Thursday, "479 479 479 1", DK/GC same as heard on Tuesday 14th, "876 37" x 2 and same 5Fs. Very strong signal, slight background hum, lower sideband well suppressed. As with the Tuesday transmissions, M12 CW could be heard in the background, in this case the call-up for "815" schedule which was up on 10,343 KHz.

1920 UTC, 7,907 KHz, "479" and "876 37", second sending, very strong signal and again, M12 "815" heard faintly, was starting up on 9,164 KHz.

1940 UTC, 6,939 KHz, "479" and "876 37", third sending, again M12 "815" heard underneath, was starting its third sending on 7,849 KHz

23-Mar-03;- 1900 UTC, 9,061 KHz, "479 479 479 1", DK/GC "9532 71" x 2, not the same 5F message as heard on Tuesday 21st although the group count was the same. "17176 07019 61282 97917....." Repeated 1920 UTC, 7,907 KHz and 1940 UTC, 6,939 KHz, all three sendings much weaker signals than when heard last Thursday.

30-Mar-06;- 1800 UTC, 9,061 KHz - this schedule has moved by one hour so it still starts at 7 PM UK time following the start of summertime, as with the new Tuesday schedule. "479" and DK/GC "8312 65", "48934 36815 55237 95971 82082.....". 1824 UTC, 7,907 KHz, second sending in progress,

1840 UTC, 6,939 KHz, "479" and "8312 65", third sending, weakest of the three, QRM from what appeared to be a broadcast station on 6,940 KHz, difficult copy.

6-Apr-06;- 1800 UTC, 9,061 KHz - has stayed on the same frequencies in April then - "479 479 479 1", DK/GC "8507 65" x 2, "87617 53722 04108 34949 01384......". Strong signal, lower sideband well suppressed. 1820 UTC, 7,907 KHz and 1840 UTC, 6,939 KHz, repeat sendings, strong signals both. 13-Apr-06;- This schedule also seems to have ended, no sign at 1800 UTC on 9,061 KHz.

Peter sums up E07 with, "The long established E07 schedules are around as expected and are following the same frequency schedules as in previous years with the exception of the Monday + Wednesday starting at 2000z, 9 PM BST which does not use the same frequencies as in 2005 and has to be searched for at the start of each new month, sometimes a difficult task due to the low mod., still a feature of many E07 transmissions. The two new E07s first noted in March, Tuesdays at 7 PM UK time and a different one on Thursdays also at 7 PM - both did the hour shift with the start of summer so they still showed up at the same clock time - seem to have gone although the Thursday schedule was logged in the first week of April on the same frequencies as in March."

Comments & Reported Net Activities for Feb/Mar 06.

24th Feb: at 1820hrs on Freq 5170 KHz: VLB on extended call, No message. Still ongoing 0100 hrs 25/2

24th Feb: at 1820hrs on Freq 4648 KHz: SYN2 on extended call, No message.Still on going 0100 hrs 25/2

24th Feb: at 1820hrs on Freq 4780 + 3557 KHz: CIO2 As above very weak 25/2

01 Mar: at 2240hrs on Freq 5230 KHz: MIW2 on extended call, No Message ongoing at 2346hrs

03 Mar at 2017hrs on Freq 5230 KHz: MIW2 on extended call, No Message still ongoing at 0200hrs 04 Mar.

04 Mar at 2017hrs on Freq 5230 KHz: MIW2 Still transmitting at 0030hrs 05/3 (Listen out for possible change)

06 Mar at 2021hrs on freq 5230 KHz MIW2 on ext call again. Lost contact at 2150hrs approx. 06 Mar.

NB:On the 24th & 25th of Feb we had SYN2 & VLB2 on extended call throughout that period and on the 27th this changed to the long strings VLB (39 numbers & letters) and SYN (29). MIW2 has been on ext call since the 01 march and is still active at this moment on freq 5230KHz. It might be worth monitoring to see if a simular pattern evolves

05 Mar at 2030hrs Reference to MIW2 above, this station has changed its call as I believed it might and is at this moment transmitting as MIWA9B10C9 on 5230KHz. (Later heard at 2100hrs by Ary B, still in progress) Back to normal as MIW2 at the 2315hrs transmission

06 Mar from 1505hrs to 2000hrs <u>MIWA10B11C10</u> was recorded by :- Mike L, Tom H, Ary B, Manolis Crete and Jochen S. I missed this but at 2021hrs when I next tuned in, it was transmitting as MIW2 again. I lost contact at 2150hrs as it faded into the background noise. It might be worth noting that the two MIW strings as underlined would appear to follow on from each other. A quick glance through my own records (Years 02 to 06) showed this could be a first time, though on April the 14th 2002 I recorded MIWTMX1504 and VLBTMX1504 both transmitting at the same time on own frequencies.

9 Mar at 2103 hrs on freq 6840KHz ART2. (Normally EZI)

9 Mar at 2346 hrs on freq 4648 KHz VLB2 (Normally SYN2)

11Mar at1630 hrs on freq 4880 KHz ULX1 also at 1900 hrs on 4270 KHz PCD1. (Credit Jochen Schafer. Kopf)

15 Mar on freq 5339KHz The Goodnight string (KPAG Below) first reported by Ary B at 1910hrs, still on going at 0105hrs 16th Mar.

17Mar at 1946hrs on freq 5170 KHz VLB2 longer initial call ended 1958hrs.

19 Mar VLBA string reported heard by Ary B, at 1655hrs on 5170 and at 1718hrs on 3360. Still ongoing at 2325hrs

20 Mar at 1755hrs on Freq 4418 KHz FDUM (Credit Ary B)

20 Mar SYNA1ZZ2B13Z was logged and confirmed at various times during the day. (Credit to Ary B, Ian Wraith, Jochen Schafer. Kopf) Still Transmitting at 0100hrs 21/3

20 Mar at 2132hrs on freq 4461 KHz FTJ + YHF2 both on freq transmitting at same moment. FTJ Freq (Credit Ary B)

25 Mar at 1830hrs on freq 4270 KHz PCD with a G97 message starting YERRS.

This message has been repeated since Sept 05. (Credit Ian Wraith)

28 Mar at 1540hrs on freq 6575 KHz HNCX (Credit F Nusser)

28 Mar at 1601hrs on freq 14000 KHz YHFx3 calls and at 1601+ 30 seconds YHFx1 call no further transmissions (Credit Mike L)

29 Mar at 1753hrs on freq 5170 KHz VLB2 on extended call ongoing at 1913hrs, weak signal

30 Mar at 1930hrs on freq 4270 KHz ULX2!, at 1933hrs this reverted to the expected PCD with a G13 VHFLZ message. At 2000 & 2030hrs it was PCD2.

Ian Wraith also notes "The ULX call on the PCD frequency is interesting and it is the 2nd or 3rd time I have seen call in this time slot. The last time was on Feb 5th 2006 which was the same night both VLB and SYN sent long strings. However there don't seem to be any signs of unusual E10 messages tonight."

30 Mar at 2230hrs on freq 6840 KHz ULX G81 RJUJI (Normally EZI)

30 Mar at 2300hrs on freq 6842 KHz EZI G15 ?CHBU. This was a definite freq shift upwards. the freq 6840 has lately been used by ART 9/3 & ULX 30/3. (NB:This must have been a technical ajustment as at 0304hrs 31/3 EZI was again on its correct freq). 31 Mar at 0400hrs SYN2 & VLB2 & CIO2 all on extended calls, freq's 3640 & 5170 & 4780 KHz respectively. Ended at 0500hrs

Thanks for your logs JC, you will see I took the Liberty of pruning out the E10, USB and the S5 and added the G in front of the group number. This makes it easier to read and should you want to copy the format for your future logs, it would mean less typing for you. (E10 Desk) *Denotes number of times message repeated within the above log.

E10 Desk April 06

Special Strings Heard During April 06

| 24/04/06 1845hrs on Freq 5230 and 3270 KHz | MIW A46Z2215B65Z2100 | = 19 L/N |
|--|--------------------------------|----------|
| 24/04/06 1911hrs on Freq 5339 KHz | KPA A46Z2215B65Z2100 | = 19 L/N |
| 25/04/06 At various times on Freq 5539 KHz | KPA A1930Z2200Z99B1945Z2215Z98 | = 29 L/N |
| 25/04/06 At various times on Freq 5230 KHz | MIW A1930Z2200Z99B1945Z2215Z98 | = 29 L/N |

Comments & Reported Net Activities During April 06.

02 April, 1945hrs on 5175KHz VLB2 and 4648KHz SYN2 on extended calls signal weak in strong static noise. Ongoing 2022hrs.Ended 2054hrs.(E10 Desk)

03 April at 1350hrs on 14000khz Mike L reports hearing SYN2 and on the 4th at 1448hrs VLB2 on the same freq.

04 April at 2303hrs on freqs 5435 KHz and 3415 KHz ART1 Transmission ended at 2307hrs C/S only. (E10 Desk)

09 April at 1900hrs JSR and ULX2 competing on the same freq (not given). ULX2 ended then JSR completed a G19 Message (HTJSX) which its been sending since 04Feb06. (Credit to Micheal Ford)

11 April at 1801 to 1805hrs on freq 14000 KHz ULX1 (Credit Mike L)

20 April at 2232hrs on freq 5170 VLB2 and SYN2 on freq 4648KHz both on extended calls. Possibly commenced at 2145hrs. Ended at 2253hrs (E10 Desk)

23 April at 0010hrs on freq 5170 KHz VLB6 c/s only. Still ongoing at 0230hrs. (And so to bed) (E10 Desk)

24 April at 2124hrs on freq on 3640 and 4648 KHz SYN6 (Credit J Hruska)

24 April. As I have noted before when one or two stations go on an extended call namely VLB2 / SYN2 / MIW2 / KPA etc one might expect a change of call at some stage later, ending up with a special string. As you can see from the log above, this did infact happen once again. The MIW and KPA Strings were also logged by Fritz Nusser 1845hrs, Ary B at 1850hrs and Jakub Hruska at 1911hrs, and I'm sure by many others also. (E10 Desk)

25 April at 0030hrs on freq 4648 KHz SYN6, still ongoing at 0200hrs.(E10 Desk)

25 April KPA and MIW long strings as above (Credit to Ary B and Mike L)

Many thanks to all for the use of your reports.

©BMLongfield E10 Desk Manager April 06 [Tnx Bob] Before we go into the logs H-FD kindly pointed out some errors that crept in concerning the Friday 1200z 8544kHz transmissions last time. The time was inadvertently stated as 0830z. The affected logs should read:

| 8544kHz 1200z | 06/01 [187/00] JoA & HFD |

| A – ADAM E – EDWARD I – ITALY (INDIA) M – MARY Q – QUEEN T – THOMAS X – XRAY | B – BAKE F – FRAN J – JOHN N – NANO R – ROBE U – UNIO Y – YOUI | IK CY ERT (RITA / ROMEC DN | C – CHARLIE G – GEORGE K – KING (KILO) O – OTTO V – VICTOR Z – ZEBRA (ZERO / ZULU) | D – DAVID H – HENRY L – LOUIS / LEWIS P – PETER S – SUSAN W – WILLIAM |
|--|--|-------------------------------------|---|--|
| From ML: | | | | |
| Mon 27 Mar 1 | 11000kHz, | 13.05-09z, only QRU 14.00z NRH | J heard, on noise. | |
| Tue 28 Mar | | 13/14.00z NRH, hig | h noise levels. | |
| Wed 29 Mar 1 | 14000kHz, | 14:02.10 - 03.12z, F | YP, on noise - wiped out by Ital o | utbanders. |

Saturday 22April, 14000kHz, E15, hard work pulling it out of the noise, but with careful use of BW & Pband. Confirms the 25 Mar log for a 14.00z Sat TX.

Note that this caught with a temporary "experimental" Z antenna, well two L's head to head so to speak. Antenna selector is out of circuit, knackered, so unable to check with the permanent antennae for any improvement.

13:58.00z, odd tones & "foghorn" sound - got my interest! 14:03.20z i/p FYP with P sounding more like PETA 14:04.40z lost into noise, no further copy.

<u>E17</u>

7635kHz 0905z 11/04[calling 274 then into a long message maybe 20 groups.Terrible reception with much QRN and fade] mndbs

E17z Nil Reports

<u>E22</u>

['E22 Secrets' document available from Files section of Group]

This station has now been removed from the Control List. It was confirmed by Mike of Sussex [mndbs] as a BC station engineering service.

E23 Frequencies and Times. All SSB [From AnonUK]

Since December 2004 skeds have become erratic, and may not stick to correct weeks. Some voice transmissions have been heard in week 2 Week 1 Usually starts on the first Monday of the Month, but there have been variations to this. Times are not rigid, has been known to start as early as Hour + 52 [Tnx AnonUK].

E25 From the E25 desk

ID's used with messages so far (new ones are underlined): 222 275 440 555 720 730 780 835 (arabic counting) and 906

222 273 440 333 720 730 700 033 (arable counting) and 900

ID's used with control messages so far (new ones are underlined):

200 209 220 227 270 272 276 277 377 422 430 440 442 449 477 557 705 708 745 784 785 788 830 837 875 877 905 909

Transmission times: any time between 11.00 and 15.00 utc (and possible earlier). Likes 12.30 and 12.45. More transmissions on one day possible.

Only one frequency known: 9450 kHz, mode AM.

So far there seem to be three different voices. Voice nr.1 is a deep male voice. Voice nr.2 has a higher voice (but defenitly male) and sounds more 'enthousiastic'. And there is a voice nr.3 which sounds very high pitched, almost female.

New revelations

After the discovery of the song used by E25 and the Arabic text of that song a couple of readers came with a translation of the Arabic text published in Newsletter 33: This one is from JMM:

To who's place do I go ? and I say oh my Lord It's you who are my joy and it's you too who are my sorrow ----A word from you, a look from you, a touch from you heat my heart and, during love nights ... love got me ..

Un mot de toi, un regard de toi, un touchet de toi me chauffe le coeur et pendant les nuits d'amour .. l'amour m'a eu .. To who's place do I go ?

To who's place do I go ? Your being far away is very long/painful ... I will live after you with memories of you with tears at my eyes, I think of you.. ------To who's place do I go ? In this life, I have no other love than you My mind in the clouds/fog, my separation (from you) is hurting/wounding Oh you, light of my eyes, (Source of) my tears, In the fire of my body, I think of you

And this one is from ACy:

TRANSLATION

* To whom I should go asking for help, And asking for my rights back from you

Because you are my joy, my pain and everything to me

* To whom I should go

A word and eye sight both shared, with luck gathered our two hearts, also love was involved

Beneath good nights, I fall in love with you. Meeting you was joy and I always wanted to see you But after I fell in love with you and you became all I need, you started to turn your back to me and To be hard on me

I wished that happiness will continue but that never happened Your love made my life like hell, and the day far from you would pass like years

* To whom I should go ...

Your absence was so long, I live after you in pain and agony Between past that is not helping me to forget what I lost

I spend all nights remember and cry, always try to hide my tears from people those who may see me and make fun of me

I don't know how long I can take what you did to me and how long I'd be able to face those people who know about us

* To whom I should go

Very nice guys, and thanks a lot for the translations!

[R?] The logs in detail Log from FredNL: Sat march 4th : 1245z calling 788 28 30 31. This sounds like the 'YL/OM' voice From FredNL: Sun march 5th :1246z 442 4 785 28 30 31 EOT 1252z From FredNL: Mon march 6th: 1244z 785 39 40 EOT 1249z. Carrier with 1kHz tone at 1241 From FredNL: Sun march 12th: 1245z 9450 442 4 449 5 EOT ca. 1252z. Short 1kHz tone at 1243z From Mike: Tuesday march 14th : 12:05z call 275 then 5831 6421 280 280 280 280 280 280 280 280 280. From Mndbs, march 14th. 1209z carrier 1213z tone 1216z intro music 1223z slowly turns off music and starts calling "830 17" loudly about 20 times 1227z OM stopped, "3." stopped ".7" stopped, then back to "830 17" for about 12 times (recording available) 1229z carrier down. The announcer was the 2nd OM. Strong signal as usual, here in Crete. From ML, march 16th : 12.00z clg 275 - then answered the door, missed mssg. From Mndbs, march 18th: 1245z E25 calling 785 41 42. From Mike: March 21st, 11:20 UTC unfortunately buried under broadcast station on 9450! Does this suggest that E25 is on air earlier than most of our reports but just not audible to us? Good possible Mike. Just park your receiver and wait. See also NL 26: it may possibly transmit between 11.00 and 15.00z. Also a log in NL6 (sept 2001): 9450kHz at 0935Z 09/08/2001. OM totally unreadable. So, might even start at any moment of the day ...

From FredNL: Sat march 18th: 1246z 785 41 42 EOT 1250z Carrier up 1240z, 1kHz tone up 1242z Heard by FredNL and DoK: Sun march 19th : 1204z 275 2344 9421 280(x8) Repeatx3 (msg rptd) EOM/EOTx 1207z From FredNL: Mon march 20: 1159z 275 3344 9401 280x8 Repeatx3 (msg rptd) EOM/EOTx 1205z Carrier up 1145z,1kHz tone at 1150z, change of OM voice in 275-call at 1202z And a little later: 1244z 2nd E25 today: just 449 called for 5 mins, ended 1249z Heard by DoK march 20: 11.48z calling 449 [R25] and a little later: 12.44z 449 [R18] Pause 449 [R9] DoK heard E25 march 22: 12.00z 275 [R44] Message [R3] 2233 0512 280... Repeat [R3] 2233 0521 280... Eom eot. This message was repeated march 23 and 24. Heard by Mndbs and DoK. 24/03/2006 Friday 1200z Calling 275 AM S7 Message 2233 0512 then 280 called ten times Repeat 2233 0521 then 280 called ten times So the second set was changed slightly! From ML: 24 Mar 9450Khz, S9 carrier 10.20-30z, no tfc. S4 carrier up 11.46-59z, weak R Prague under. 11:59.10z into repeat of Thurs 23rd 11.59z TX. From ML: Sat 25 Mar, 13:42.30z Music/singer up. 13:48.00z "227 1" x 20, older OM, read very slowly. 13:51.40z ended, no sign-off. Heard by ML, DoK and PLondon: Sun march 26, 11.59z "275" x 43 (speeded up from No 24) 12.03z message [R3] 2415 1521 240 (x 11) repeat obliterated by "machine gun" QRM which stopped at end of TX, ending not heard. OM older voice. DoK reported this one: march 27th: 11.58z 275 message [R3] 1422 5070 4410 1241 8354 2947 4410 Repeat [R3] - rpt of msg - eom eot. And another on the next day, march 28th: 12.00z 275 message [R3] 2415 1521 280... Repeat [R3] - rpt of message - eom eot. Manolis from Crete March 29th: 9450 kHz AM: 1202 UTC Arab music different than the usual (the one with the YL). 1204 UTC Carrier down, then up again, with better signal strength. 1209 UTC "830 21", repeated many times. 1212 UTC Stopped. 1214 UTC The same music again. 1221 UTC OM calling "830 21" again, until 1228 UTC, end of transmission. Manolis from Crete March 29th: 9450 kHz AM: 1240 UTC (E25) Very strong carrier and tone. 1244 UTC OM started calling numbers with a very low audio level, then leveling up to "785 45 46" till 1248 UTC. Manolis from Crete and DoK heard this one: march 31, 1239 UTC Strong carrier + tone. 1244 UTC E25 OM "788 47"

1248 UTC OM knocks on the mic three times, then again "788 47".

1251 UTC One knock again and carrier down a few seconds later.

Saturday 1 April 2006 1239 UTC Strong carrier with a tone. 1244 UTC E25 OM repeating "785 47", knocked the microphone 3 times and ceased at 1249 UTC. Manolis from Crete reported.

DoK reports, april 10th: 12.00z 275 message [R3] 9045 2541 4901 6246 7409 7927 2042 6757 1141 2943 7742 5809 6902 4901 Repeat [R3] - repeat of message-Eom eot.

From DoK, april 11th: 12.34z 555 msg[R3] 1245 4101 2421 4734 4101 Repeat [R3] - rpt of mssg - eom eot.

April 12th, from DoK: 11.59z 275 message [R3] 437. ... Rest of message not copied.

April 13, heard by DoK and Manolis from Crete: 9450kHz, E25, older OM, sig improved towards end. 11.58z "275" R 12.02z m m m 8373 3501 280(x10), r r r 12:04.40z eom eotx Some of the "0's" in 280 were sounding very much like "zulu"

DoK heard E25 on april 16th: 12.39z 745 49 708 48 52 705 41 708 44 40 705 49

Heard by Manolis from Crete: March 22: E25 9450 kHz AM 1219z-1224z "830 27" QRM from a RTTY TX a few kHz below.

April 23: 1200z 275(R) Msg(R3)280(R8)Rebeat(R3)Msg(R3)280(R9)EOM EOT at 1207z] XJT obliterated sending 1202 to 1204z. Rest QSB msg text part received only - -2- - -52-PLondon

From FredNL April 25: 12.04z very weak, calling 240(?) a few times, then strong QRM (jamming?)

We received a study from FredNL.

E25 - A SHORT STUDY OF THE 275-MESSAGES WITH 280-REPEATS

After logging another E25 275-message today (Monday 20 March) with just the two 4- figure groups and a number of '280's repeated, and having my rig mostly monitoring one particular frequency the whole afternoon anyway, I spent some time doing the following study regarding the odd format of "4f 4f 280(Rptx?)":

FACTS WE HAVE SO FAR:

"275-280" Messages Logged in E2K NLs (+ 3 from my March log) Since the "275-280"-messages appeared 4 months ago, 15 such msgs logged:

| Mon | 20 Mar 06 | 275 | 3344 9401 | 280x8 |
|-----|------------|-----|-----------|--|
| Sun | 19 Mar -06 | 275 | 2344 9421 | 280x8 |
| Thu | 16 Mar -06 | 275 | 6304 7421 | 280x10 |
| Wed | 08 Feb -06 | 275 | 8305 5421 | 280x10 |
| Tue | 03 Jan -06 | 275 | 1410 2431 | 280x11 |
| Sun | 01 Jan -06 | 275 | 5410 2431 | 280x10 |
| Wed | 28 Dec -05 | 275 | 7385 1421 | 280x10 |
| Tue | 27 Dec -05 | 275 | 7384 1221 | 280x10 |
| Thu | 15 Dec -05 | 275 | 9311 | 280x10 |
| Thu | 08 Dec -05 | 275 | 4384 8370 | 280x6 (rpt 5 Dec msg) |
| Wed | 07 Dec -05 | 275 | 4384 8370 | 280x5 (rpt 5 Dec msg) |
| Tue | 06 Dec -05 | 275 | 4384 8370 | 280x5 (rpt 5 Dec msg) |
| Mon | 05 Dec -05 | 275 | 4384 8370 | 280x5 |
| Wed | 23 Nov -05 | 275 | 3322 7301 | 280x8 |
| Thu | 17 Nov -05 | 275 | 4982 5370 | 082x5 (Logged as 082, not 280: Arabic reading R to L?) |
| | | | | |

WHAT CAN BE FOUND IN THIS:

Referring to previous E25 analysis presented in the E2K NL regarding the non-randomness of certain E25 number groups, the two 4-figure groups in these "275-280" messages are also clearly non-random. Several algorithms have been applied, with no success so far, but as more data are gathered pattern(s) might appear.

The varying number of repeats of 280 might also be non-random and carry some information by itself. Then again, the number of 280-repeats might carry no significance at all!

Another point, much more concrete: tx weekdays for the logged "275-280" msgs turns out to have been:

2xMon 3xTue 4xWed 4xThu 0xFri 0xSat 2xSun

This might be interesting, ref the E15 schedule and the possible tx site(s) of E25! Let us expand from "275-280" msgs to include ALL E25 messages for a period. Let us look at e.g. May -05 to today, Mid March -06:

Friday TXs, All Types of Messages Included, May -05 to March -06:

03 Feb -06 ord. msg ip, ID unknown 18 Nov -05 222 msg 14 Oct -05 275 ("old" 275) msg 09 Sep -05 222 msg 02 Sep -05 222 msg 26 Aug -05 785 2 26 Aug -05 785 2 26 Aug -05 227 4 220 3 03 Jun -05 275 msg 13 May -05 909 27 06 May -05 442 msg

From May -05 to March -06, E25 logs show a total of 95 msgs. Of these, 10 were on Fridays. This would be just slightly below an average distribution.

BUT:

After the new "275-280" format appeared 4 months ago, a total of 44 msgs have been logged in all acc to E2K NLs, but only 2 of these tx's were on Fridays, and none of these 2 were "275-280" format (On 18 Nov 222 msg & 03 Feb unknown id, but a reg msg, no 280-rpts). This could indicate that E25 has changed policy regarding Friday tx's, and strongly reduced them.

Proof-reading this small "study", I realise that this effort leaves more questions than answers – as such studies tend to end up! I guess it just reflects the intrigue surrounding E25!

Of course, as always, these statistics might also just be a reflection of our listening patterns, propagation conditions, etc.

Thanks Fred! [Tnx E25 Desk]!

<u>G06</u>

Excellent analysis from PoSW:

First Monday in the Month 1900 + 2000 UTC Schedule call always "308";-

6-Mar-06;- 1900 UTC, 6,875 KHz, "308 308 308 00000", strong signal, lower sideband well suppressed. Almost the same frequency as in March last year which was 6,870, would probably have been today but for the strong wide-shift FSK signal on that frequency this evening.

2000 UTC, 5,190 KHz, same as in March 2005, second sending, strong signal.

3-Apr-06;- 1901 UTC, 8,059 KHz, something of a delayed start this evening; carrier was up on 8,055 KHz - the frequency used for this sending in April <u>last</u> year - at 1840z, QSYd to 8,059 around 1850z. Went on and off several times and just before 1900z went off after some ragged, tearing noises, sounded like something arcing over in the TX final! Suddenly came up 1901z calling "308" for a full message, DK/GC "527 527 106 106", strong signal, lower sideband well suppressed.

2000 UTC, 6,930 KHz, "308" and "527 527 106 106", second sending, started on time, almost the same frequency as in April last year, 6,935 KHz.

4-Apr-06, Tuesday;- 1900 UTC, 8,055 KHz, next day repeat of yesterday's "308" and "527 527 106 106", much weaker signal than yesterday, missed second sending.

Thursday 1830 UTC Schedule;-

9-Mar-06;- 5,931 KHz, as in March of previous years has moved from 4,519 KHz used in the winter months to a frequency inside the 49 metre band. Call "597", DK/GC "136 136 30 30", severe interference from broadcaster Radio Prague on 5,930 KHz, difficult copy. 23-Mar-06;- 5,934 KHz, "597" and "136 136 30 30", as when last heard two weeks earlier. Slight change of frequency but still swamped by broadcast station.

13-Apr-06;- 5,934 KHz, has missed <u>two</u> weeks, call "597", DK/GC "832 832 35 35", same frequency as when last heard on 23-March but a much stronger signal, difficult copy as AM thanks to the S9++ broadcaster on 5,930 but this is completly removed by using the RX in USB and there was no problem in copying the 5F message, "57944 46878 65481 48671 47171.....".

Friday 1930 UTC Schedule

Friday 1930 UTC Schedule, always used to be the same DK/GC and 5F message as on the preceeding Thursday at 1830z but with a different call but has often not been the case in recent months and was not so in March;-

10-Mar-06;- 5,442 KHz, started late at 1931 & 30 seconds UTC, the expected change of frequency from 4,792 KHz used in the winter months. Call "947", DK/GC "361 361 31 31", NOT the same as Thursday's 1830z sending. Carrier was up when checked at 1844z, nothing heard until start up time, certainly none of the club-dance type music which preceded the Friday Night Fraulein on 10-February!

24-Mar-06;- 5,442 KHz, "946" and "361 361 31 31", same as on the 10th but not the same as yesterday's 1830z.

14-Apr-06;- 5,442 KHz, the Friday transmission is well known for the carrier being up well before start-up at 1930z but tonight was a record because the frequency was being warmed up at 1823 UTC, well over an hour earlier when a chance tuning across this part of the spectrum found the Friday Night Fraulein calling "1-2-3-4-5-6-7-8-9" over and over, no "Null"! Plain carrier for an hour or so until 1930z during which time the signal strength had gone down from a good S9 to S3 or 4 at best. Call "947", DK/GC "283 283 37 37", <u>not</u> the same 5F message as yesterday's 1830z sending. These two transmissions always used to send the same message but with a different "call" but this convention has often been broken in recent months.

Started to copy the message, "86454 65474 38718 15451 26286......" but not long afterwards the signal became so weak as to be unreadable and sank into the noise.

Weekend Schedule;-

The G06 YL had been heard several times in Jan and Feb on Saturdays at 2200 UTC in the region of 4,441 KHz, probably alternate weeks, repeated on the following day if "full message". Not found on this frequency in March but was logged once higher up;-

18-Mar-06, Saturday;- 2200 UTC, 5,252 KHz, "843 843 800000", same call as in Jan. and Feb. Found in progress just after 2200z, S9+ signal, lower sideband well suppressed. Was probably also on two weeks earlier, i.e. 4-March but I have lost track of it in April. [Tnx Peter].

<u>Freqs $\pm 2kHz$ </u>

Activity Designations:

R: Regular transmissions on the time and day shown weekly

I: Irregular transmissions on the day and time shown

ALT: Regular transmissions on the day and time shown, but on alternate weeks.

Chart 24 shewn above is almost identical to Chart 23, however the following additions and alterations:

Wednesday/Thursday 1700z 5917kHz is the // to 9166kHz; Monday/Tuesday 2200z is now 3522//4485kHz; Monday/Tuesday 2200z 5945kHz, no //; Tuesday/Wednesday 1855z 13405//15785kHz (15785 is a new frequency).

The 2200z changes, brought to my attention by RNGB, and the 1855z frequency, brought to my attention by PoSW, my thanks to you both.

The rotational change returned to normal on the 1st May, therefore Chart 24 is the updated version of Chart 20. However, expect some changes. The next Chart 25 will include changes that have already come to light. The new // for S17c is 4485kHz and found by Fritz Nusser, well done Fritz!

A new schedule on Thursday/Friday 1000z on 15785//18303kHz. The 1100z schedule remains as stated but on 18303kHz only repeated at 1440z and 1530z.

The schedules shewn with no frequencies assigned are still believed to be active an a concerted effort would be appreciated to assist with their discovery.

73 Derek – DoK – Slavic Desk [Tnx Derek].

S06 (slow) is much clearer now that the old 'Babooshka' has been changed for a nice Young Lady who's pronunciation is very good. Frequencies have changed to the March/April/Sept/Oct set, and are all as expected.

Most will keep to original times but a few will move 1 hour early.

There would appear to be at least two different transmitters in use. Some of the higher frequency skeds (like Weds 0700 ID 729 and 0840 ID 328) use AM mode with lots of amplifier hum, and most of the lower frequency skeds have the lower sideband well suppressed.

The Weds sked for ID 475 is unusual in that it keeps same frequency all year. It is thought that it does repeat 10 minutes later, but the frequency has never been found. (Probably buried under a strong broadcast station). This sked is expected to move one hour early in Maystarting at 0730.

S06 (fast ending)

| | 1200 | 8130 | [.] 480 [.] 632 42 85415 |
| | | | |

Most skeds will repeat at same time the following day when there is a message.

There are a few exceptions of course.

A strange one is the ID 480 which has popped up on several occasions this month and does not seem to have a repeat. All the messages have been different (look at last entry for 29th March) Different message on same day!)

It likes frequencies 8130 and 9225 and also likes Mondays and Wednesdays. Times are around 0830/0900 and 1200/1300.

May change ID next month? Another peculiarity is that the frequency is not tuned up and keyed ready for the transmission – it just pops up without warning. So just because you don't hear any carrier wave on these frequencies does not mean that it won't be there!

On Thursday the 9th it came up on 9225 khz at 0939 with a message and just ended before the start of S06 (slow) sked on the same frequency with ID 895. I wonder if the transmissions were co-ordinated? It would have been interesting if S06 (fast) had run into S06 (slow)

The Saturday afternoon sked of ID 724 on 15840/13890 was on a very high pair of frequencies for the time of year and I only heard 15840 very weak on the 4th Saturday, and not audible on the 2nd.

Another interesting one is ID 126 which has not had any 8s or 9s in the message body. I recognised that this may be a simple binary code sending 3 bits (making 8 numbers; 0 to 7) from my days of studying radar theory.

This is how aircraft mode 3/A radar transponders work and they send 3 bits x 4 to make 64 codes and then they combine that with another box of 64 codes giving a total of 4096.

000 = 0; 001 = 1; 010 = 2; 011 = 3; 100 = 4; 101 = 5; 110 = 6; 111 = 7

Of course it may be, as Paul suggested, that the cryptographer just had an aversion to 8s and 9s [Tnx RNGB].

PoSW's logs:

Second and Fourth Saturdays in the Month 1600 + 1700 UTC, call always "724";-

25-Feb-06;- 1600 UTC, 13,380 KHz;- "724 724 724 00000", strength S8, lower sideband well suppressed.

1700 UTC, 11,430 KHz, second sending. I can't remember when this schedule last sent a "full message", if at all. Had also been heard on the second Saturday in Feb., the 11th, same frequencies as in Feb. last year.

11-Mar-06;- unable to find "724" today, the second Saturday in March; has been using the same frequencies as in the same month last year so was expected to be on 15,840 + 13,890 KHz, used in March 2005 but nothing heard. Try again on the fourth Saturday, the 25th.

25 Mar-06;- 1600 UTC, 15,840 KHz, "724 724 724 00000", found on the expected frequency but a very weak signal, only just readable. 1700 UTC, 13,890 KHz, second sending, also on the expected frequency, much stronger than the first, peaking S7 with deep QSB. Strange that neither sending was heard at this QTH two weeks ago.

8-Apr-06;- and again, unable to find "724" on the second Saturday in April, was on 14,910 + 12,190 KHz in April last year, neither sending found although there was a very weak signal of some kind on 12,190 at 1700z but unable to hear any kind of voice. Better look again on the 22nd!

22-Apr-06;- no sign of either sending of "724" on the frequencies used in April last year, either too weak to be copied or using different frequencies entirely.

Second and Fourth Saturday 1605 UTC Schedule, moved to 1600 UTC in April;-

11-Mar-06;- 1606 UTC, 5,463 KHz, S06 in progress with "108 108 108 00000", S8 signal, stopped 1609z so must have started 1605z. There used to be a second + fourth Sat S06 at 1600z on 6,772 KHz with cal "890" but I lost track of it late last year. 25-Mar-06;- 1605 UTC, 5,463 KHz, "108 108 108 00000", S7 with lower sideband well suppressed. Carrier with tone was warming up the frequency 1549z.

8-Apr-06;- 1600 UTC, 6,788 KHz, starts five minutes earlier and on a higher frequency in April, "call" remains the same though, "108 108 108 00000", strength peaking S9, lower sideband well suppressed, close to strong "XJT" on the LF side removed by copying S06 in USB mode.

22-Apr-06;- 1600 UTC, 6,788 KHz, "108 108 108 00000" again, S9+ signal, carrier was up at 1548z, no QRM today.

Saturday 1930 UTC, Schedule;- appeared to be a weekly S06 in March - but turned out not to be so;-

4-Mar-06;- 5,746 KHz, "428 428 00000", strength S7, lower sideband well suppressed. A carrier with tone had been noted 1917z, a single "spoken "Cheteria dva vosyem" shortly after then went off until start-up on the half hour. 11-Mar-06;- 5,746 KHz - didn't expect this to appear two weeks in a row but carrier with tone was up 1919z, "428 428 428 00000" at

1930z. 18-Mar-06;- 5,746 KHz, "428 428 00000", stronger than before, S9 with a distinct loud click before eack spoken "Cheteria". But

this was the last time this one appeared; not heard when listened for on the following Saturday, 25-March. Not found in April so far.

Tuesday 1630 + 1730 UTC Schedule;-

28-Feb-06;- 1730 UTC, 5,380 KHz, calling "497" - this schedule always has a full message - DK/GC "521 521 63 63", second sending, strong signal, lower sideband well suppressed.

1-Mar-06, Wednesday;- 1741 UTC, 5,380 KHz, next day repeat of yesterday's full message in progress, still on January's frequency. Ended 1745z with "521 521 53 63 00000".

7-Mar-06;- 1730 UTC, 6,960 KHz, a change of frequency, calling "126", DK/GC "973 973 64 64".

8-Mar-06, Wednesday;- 1738 UTC, 6,960 KHz, next day repeat in progress, ended 1745z, "973 973 63 63 00000".

14-Mar-06;- 1730 UTC, 6,960 KHz, calling "126", DK/GC "483 483 75 75"

28-Mar-06; 1630 UTC, now that British Summertime has started S06 appears one hour later local time since it stays on UTC. 9,070 KHz, first sending, call "126", DK/GC "543 543 78 78", strength S7, lower sideband well suppressed, "10114 72151 23417 32544.....". 1730 UTC, 6,960 KHz, second sending of "126" and "543 543 78 78".

4-Apr-06;- 1630 UTC, 10,842 KHz, moving higher in frequency with the increasing hours of daylight, calling "036", DK/GC "854 854 71 71", strength S6.

1730 UTC, 8,180 KHz, second sending of "036" and "854 854 71 71". Stronger than first sending, S8 to S9. QRM from what sounded like 2-way SSB comms in Spanish language, lots of "Cambio cambio".

5-Apr-06, Wednesday;- 1630 UTC, 10,840 KHz and 1730 UTC, 8,180 KHz, next day repeats of "036" and "854 854 71 71".

11-Apr-06,;- 1630 UTC, 10,825 KHz;- calling "036", DK/GC "941 941 72 72"

1730 UTC, 8,180 KHz, second sending.

12-Apr-06, Wednesday;- 1637 UTC, 10,842 KHz, next day repeat 17 KHz higher, ended after 1646z with "941 941 72 72 00000". 1730 UTC, 8,180 KHz, second sending.

Second + Fourth Monday Schedule;-

13-Mar-06;- 2115 UTC, 6,980 KHz, "491 491 491 00000", strength S7, lower sideband well suppressed, sideband splash from the strong BC station on 6,973 KHz. Carrier with tone noted just before 2100z, single spoken "491" a few seconds afterwards. 27-Mar-06;- 2115 UTC, 6,980 KHz, "491 491 491 00000", again, unable to find a repeat sending.

10-Apr-06;- 2015 UTC, 8,150 KHz, "825 825 825 00000".

See end of this Newsletter for the updated "S06 Regular skeds ending slow"

<u>S10d</u>

Before we move onto the logs PoSW's analysis of this station and his logs:

As expected, and as in previous years, there were several frequency changes with many of the regular weekly S10d schedules in the first week of March, in general moving higher. And also as expected, S10d remains on UTC with the start of summertime which means transmissions appear one hour later clock time. Always with two frequencies in //, often one strong and one much weaker and often wide variations in signal strength from week to week for some reason.

Weekly schedules include the following;-

Saturday 1520 UTC, 8,175 // 9,985 KHz, this is one S10d which did not change frequencies in March. 8,175 KHz is usually the strongest of the two frequencies although there is a strong "XJT" on the LF side but this can be removed by using the receiver in USB mode. 9,985 suffered from interference from broadcast stations throughout the earlier months of the year, one of which attracted the attention of a swept-frequency jammer but all this has gone in April leaving the Czech YL a clear signal.

Saturday + Thursday 2130 UTC, 5,473 // 6,894 KHz, changed in March from 4,446 // 5,904 KHz used in the winter months. Wild variations in signal strengths form week to week, on Thursday 2-March both were very weak, 6,894 only became audible towards the end of the transmission, one week later on the 9th both were S9 to S9+.

Saturday + Thursday 0600 UTC, 11,416 KHz. // should be 9,985 KHz as in April of previous years but not heard so far! Probably a weak signal under a broadcast station on that frequency. In fact I could not even confirm 11,416 until Thursday 20-April when the Czech YL was fully audible for the first time with "555 555 555 115 115 115 115 41".

Sunday + Tuesday 2050 UTC, 7,745 // 6,894 KHz, changed in March from 5,272 // 5,904 KHz used in the winter months, again signal strengths variable. On Sunday 5-March 7,745 was very weak and 6,894 could not be heard at all. On Sunday 26-March both frequencies were S9 at first but propagation must have been changing because 7,745 became much weaker in the last few minutes of the transmission. On Tuesday 14-March both frequencies were transmitted with the carrier suppressed which meant that the receiver had to be in USB mode

Monday + Tuesday 1740 UTC, 6,945 // 10,582 KHz, changed from 5,028 // 7,605 KHz used in the winter. Always has two seperate 5F messages.

Non Weekly Schedules;-

These schedules which do not appear weekly are more easy to miss than those which show up on the same day of each week, also these have somewhat unusual start-up times which makes them more likely to be overlooked. However, the following have been logged in recent weeks;-

12-Apr-06, Wednesday;- 7,745 KHz, a strong carrier had been noted on this frequency at around 1750z which suggested a transmission just finished or one about to start. Nothing happened until 1820 UTC, half an hour later, when the Czech YL started up with "555 555 720 720 720 38". A frantic search through some back numbers of the E2K newsletter with regard to the Slavic Desk's charts found a listing for an "Alternate" sked with a // of 9,386 KHz which, by Jove, on checking it was although it was a much weaker signal and I thought the frequency was closer to 9,385. Presumably will show up again on 26-April.

5-Apr-06, Wednesday;- and now for something completely different, surprised to say the least while tuning around just after 1906 UTC, 8.06 PM BST, to find the S10d YL in full flow on 15,785 KHz at the top end of, or just outside, the 19 metre band. I am sure I have never logged this frequency before and I can't see it listed in E2K. There were some strange propagation conditions at the time, all of the broadcast stations in the 19 metre band were much weaker than usual for this time of the day, not too long after sunset and indeed, the Czech YL was stronger than most of them. S10d ended just before 1908z with the usual "Pozor pozor" and "62 62 38 38" and "Konets konets". The Slavic Desk's chart 18 in E2K28 lists an Alternate Wednesday 1855z transmission on 13,405 KHz so maybe this is the //. Must check again on 19-April.

19-Apr-06, Wednesday;- 1855 UTC, 13,405, // confirmed as 15,785 KHz but much weaker than when heard on the 5th. "555 555 555 720 720 720 36". 13,405 peaked S7 briefly during the call-up before sinking into the noise, 15,785 only just detectable, I would never have been able to find this if I had not heard the stronger showing earlier in the month. Severe QRM hash from all the TV sets running in the vicinity. [Tnx PoSW]

V02 Cuban Stations

This station has now achieved world notoriety after being heard in Australia, details later.

PoSW reports his monitoring of the Spanish Lady before we move on the Mark Slaten's comprehensive logging from the US and his schedule charts which can be seen at the end of the Newsletter.

Signals from the Senorita from Havana heard in the UK morning time have become slightly stronger as we proceed through the spring with rapidly increasing hours of daylight.

2-Mar-06, Thursday;- 0711 UTC, 9,153 KHz, transmission in progress, weak signal but had come up to S6 when ckecked again at 0740z. Ended with 3 x "Finale" just after 0745z.
4-Mar-06, Saturday;- 0713 UTC, 9,153 KHz, weak but reasonably clear, best reception of this Saturday morning transmission for a while.

4-Mar-06, Saturday;- 0713 UTC, 9,153 KHz, weak but reasonably clear, best reception of this Saturday morning transmission for a while. 5-Mar-06, Sunday;- 0805 UTC, 9,354 KHz, very weak signal, this Sunday morning V02 noted in February and continues in March. 9-Mar-06, Thursday;- 0709 UTC, 9,153 KHz, weak but clear.

2038 UTC 7,887 KHz, transmission in signal, strength S4 at best, these V02s in the UK evening have become very weak in the last month or so. Ended after 2041, a bit earlier than usual, with 3 x "Finale".

16-Mar-06, Thursday;- 0712 UTC, 9,153 KHz, strength S6.

17-Mar-06, Friday;- 0711 UTC, 9,063 KHz, peaking S7, QRM from utility transmission.

2032 UTC, 7,882 KHz, very weak signal, only just detectable.

18-Mar-06, Saturday;- 0700 UTC, 9,153 KHz, strength S7 with deep QSB, managed to be in at the start-up, "Atencion, 67932 37911 23941".

24-Mar-06, Friday;- 0636 UTC, 8,010 KHz, V02 just audible under severe FSK interference.

0714 UTC, 9,063 KHz, weak signal.

25-Mar-06, Saturday;- 0641 UTC, 8,097 KHz, signal strength S6 to S7, ended with 3 x "Finale" 0646z.

0702 UTC, 9,153 KHz, - carrier was up on the hour but voice did not start until almost two minutes afterwards - "Atencion, 99742 37912 23943. Signal strength up to S7 but with deep QSB.

30-Mar-06, Thursday;- 0539 UTC, 8,097 KHz - summertime now in force so V02 shows up one hour later local time - transmission in progress, strength S7 with QRM from a wide-shift FSK signal off to one side. Ended with 3 x "Finale" 0546z. Thought this might start up again on the hour but when checked several times between 0600 and 0610 UTC there was just a plain carrier with a slight background hum.

31-Mar-06, Friday;- two sepearate transmissions presumably having started around 0600 UTC;-

0611 UTC, 9,323 KHz, very weak signal; and another V02 on 8,010 KHz, much better signal, peaking strength S8, good audio and no sign of the FSK station which often sits close to this frequency.

1-Apr-06, Saturday;- 0719 UTC, 9,153 KHz, transmission in progress, much weaker than on past few Saturdays, only just making S3. 2-Apr-06, Sunday;- Two Sunday morning transmissions this morning, the Sunday 0800z on 9,385 KHz logged in Feb. and Mar. seems to have gone;-

0716 UTC, 9,063 KHz, this frequency noted on Fridays, not heard on a Sunday before; transmission in progress, only strength S5 with deep QSB right down into the noise, paused at 0718 UTC and repeated "53161" several times before continuing with more 5Fs. 0819 UTC, 7,975 KHz, another V02 in progress, signal strength peaking well over S9, by far the best reception of a V02 for a long, long time.

3-Apr-06, Monday;- 0612 UTC, 9,331 KHz, weak signal with a distinct echo effect, no doubt due to some kind of multi-path propagation.

6-Apr-06, Thursday;- no sign of V02 on 8,097 KHz when checked around 0540z or again after 0600z, not even a carrier. 7-Apr-06, Friday;- 0612 UTC, 8,010 KHz, transmission in progress, strength S7 to S8, good audio, no background hum, buzz or

distortion. Nothing heard on the other Friday 0600z frequency, 9,323 KHz.

8-Apr-06, Saturday;- no sign of a transmission at 0600 UTC on 8,097 KHz.

0700 UTC, 9,153 KHz, carrier only when monitored on the hour and for several minutes afterwards. Voice was in progress when checked again 0735z, peaking S7 with deep fading. Suddenly became very weak, sank into the noise and vanished at 0742z, no "Finale" heard, perhaps a transmitter fault?

9-Apr-06, Sunday;- 0759 UTC, 7,975 KHz, started one minute before the hour, "Atencion, 72263 63952 19832", only strength S4 at best, much weaker than last Sunday when it was S9+.

14-Apr-06, Friday;- 0624 UTC, 8,010 KHz, weak signal, nothing heard on 9,323 KHz.

15-Apr-06, Saturday;- no sign of the Senorita from Havana on 8,097 KHz when checked at around 0620z or on 9,153 KHz after 0700z, not even a carrier.

16-Apr-06, Sunday;- 0711 UTC, 9,063 KHz, very weak signal of some kind on the frequency noted in use on Sunday 2-April, too weak to confirm as V02.

0800 UTC, 7,975 KHz, very weak signal, could just make out the "Atencion" of the call-up.

20-Apr-06, Thursday;- 0538 UTC, 8,097 KHz, first time I have heard this Thursday transmission for several weeks, good signal this morning varying between S7 and S9. Expected to start up again at 0600z but in fact started just before the hour, when checked at 0559z was calling up with "Atencion, 49593" 00583 05362, then "49593" repeated and into 5Fs after 0602z.

21-Apr-06, Friday;- 0609 UTC, two transmissions in progress, 8,010 KHz, strength S7 with background buzz and 9,323 KHz, very weak signal, only just detectable.

22-Apr-06, Saturday;- no sign of a transmission on 8,097 KHz when checked after 0600z, but;-

0701 UTC, 9,153 KHz, this one did show up this morning, carrier up when checked just before the hour, voice did not start until a minute past, "Atencion, 59702 04593 35422". Peaking strength S6 with deep QSB.

Thanks Peter, now on to Marks excellent logs:

<u>V13</u>

In message 4573 dated 05/03 Ben Mesander wrote,

"For a while, V13 seemed to have timeshifted into slots where it was not possible to hear it at my QTH. It seems to have resumed at least some skeds that are possible to pick up in the western US. Check around 1100utc-1500utc on:

| 8300.0 kHz 9275.0 kHz 9725.0 kHz | |
|---|--|
| 11430.0 kHz 11433.0 kHz | |
| 13570.0 kHz 13650.0 kHz 13750.0 kHz | |

15388.0 kHz

Note that some of the above freqs are in error, but since it's been so many years since I monitored this station I can't remember the ones that are "real". [Tnx Ben]

We have received two unsubstantiated reports concerning this station – worth keeping an eye on if it's within your capabilities.

<u>V24</u> Nil reports this time.

POLYTONES

We put the revised tones in the last Newsletter only to be told of an anomaly – as a result re print the corrected tones.

| 0: 760; | 1: 800; | 2: 840; | 3: 880; | 4: 920; | 5: 960; | 6:1000; | 7: 1040; | 8: 1080; | 9: 1120 |
|------------|---------|----------|-----------|---------|---------|---------|----------|----------|---------|
| Start Low: | 520; | Start Hi | gh: 1280; | Space: | 680; | End Lo | w: 720; | Repeat: | 1200; |

The values above show little variation from measured values and good tolerance around subsequent measured values. The shift between the numerals is a linear and unchanging 40Hz.

Whilst perfectly adequate the strengths received by PLondon on 03/03were variable and some fading was noticed. JoA echoed this with his report to E2k but at better strengths than PLondon realized at his South Ken works QTH.

A quick count proved RNGBs hidden group as 64+64+28-2+154 gc+1. The hiddem group was 42623. Tuesday 07/03 sendings started off with a reasonable sending with QRN; good strengths were reported by JoA for all sendings whilst PLondon suffered low signal strength at his SW7 works QTH. [The autosys returned good sigs at his home QTH though].

Whilst weak with PLondon the signals were of good standard and allowed analysis. 260 actual groups were sent and after correction [64*4+4-2=258] proved gc+1, the hidden group being 43593.

The above image illustrates the fading encountered during the sending of the last four groups between 0700z [top] and 0720z [bottom] sending. The final analysis of the Last and Hidden groups being made on the 0720z and checked against the 0740z. At the end of the lower trace the effects of PLondon removing his sharp filter can be seen.

Sendings on 10/03 were reported by JoA as being very good; PLondon's signals were not so good due to QRM and desensing.

Perusal of the above spectrogram will illustrate use of a double space [seen at 177s] between the last and penultimate group. The usual arithmetic was done 64+64+22-2=148 and proved gc+1. The carrier for this sending came up at 0712z and was followed by a single tone. Shortly after a Morse character was sent -...- or =.

Excellent sendings throughout for the morning schedule on 14/03. gc+1 proven.

The sending on 17/03 was a null message and all three transmissions were noted with very good signals by JoA – S9+35dBs. PLondon also remarked that the signals at his SW7 work QTH were like good strength across the entire schedule. The strong signals were maintained on 21/03 with a long message lasting 4m28:22s. gc+1 was proved.

The sendings of 24/03 were variable, for PLondon 0740z gave the best response.

With GMT advancing to z+1 the zulu time of 0700z was maintained for this sending and all three 28/03 were3 strong and good quality, albeit a null message, a repeat of that sent 17/03.

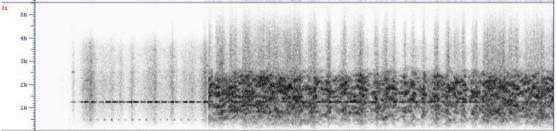

March Evening Schedule

The expected first March sendings on Friday 03/03 were not found despite correct searching by JoA and PLondon. However Tuesday 07/03 saw a combined effort by GD, JoA, RNGB and PLondon and resulted in all the freqs being found. The line up is that used last October and had been suggested prior to us not finding them on 03/03.

The signals were fair with all concerned and RNGB contacted PLondon with message detail. PLondon was unable to use his email due to Yahoo UK being unavailable [checked with JoA by telcon]. Thanks to all concerned who rang in with results. Excellent team work. 14/03 was a repeat of that sent on 07/03 and 10/03. The sending on 5924 suffered with BC QRM but a tight post filter brought:

| | 2k | 1 | | 19-16 | | | - | | | | | | | 114 | | 1.5 | | | 211 |
|------|------|-----|-----|-------|-----|-----|----------|-----|-----|-----|-----|----------------|-----|-------|-----|---------------------|-----|-------------------------|-----------|
| | lk - | | | | | | ER BURNE | no | | | | . * 20000 V | | -un + | | 1 ¹¹¹⁰¹¹ | 1 | an an i a An an i an | ********* |
| Time | (s) | 109 | 110 | 111 | 112 | 113 | 114 | 115 | 116 | 117 | 118 | 119 | 120 | 121 | 122 | 123 | 124 | 125 | 126 |

The filter all but removed the troublesome speech. The 2140z sending was not quite so good; XJT suddenly appeared on frequency and obliterated a majority of the sending:

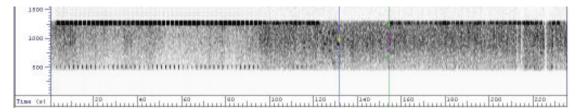

Perusal of the above shews the effect XJT has on transmissions it is sent over the top of.

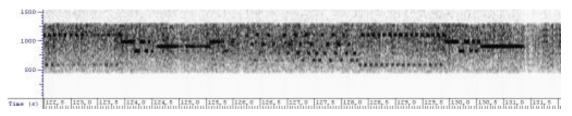

The first evening message of March was sent on this schedule on 24/03. All sendings were good readable although the 2120z was troubled by the usual BC QRM. The 2140z sending produced the best trace of the evening.

Sitting up beyond 2200z PLondon and JoA intercepted the post clock change sendings with mixed results between them. For JoA the last sending was his best, whilst for PLondon the first was his best – actually comparable to his post sending filtered 2120z transmission. His 2140z was very poor, with a signal strength variable between S5 to S9. He found the audio to be weak and watery and dominated by a scratching type local[?] QRM. A comparison of spectrograms and tones illustrated a repeat of the 71group [or 72 with gc+1 taken into consideration] message sent on 24/03. March final morning sendings on 31/03 were not very good at PLondon's QTH and mainly noisy.

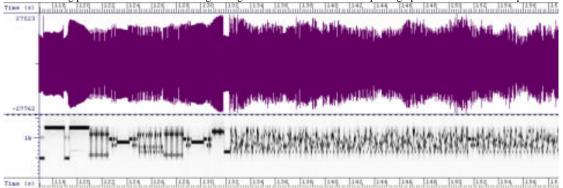

The third sending started at S9 went to S7 noise wise and in the middle of its sending ceased as can be seen below:

The 22.66s gap between the ID and the part re start can be clearly seen. Below is the detail of the fail:

Using a full message PLondon was once again able to prove gc+1.

The last sending produced excellent received signals right across the schedule as the spectrograph and waveform below proves:

gc+1 was again proved and it is worth noting that there was the slightest het on the second sending, the BC station could barely cope with the strong XPA signal and was certainly outclassed for once.

April Morning Schedule

The frequencies for the morning sendings were as previously seen in April 2005, the clocks having advanced by H+1 the sendings now occurring at 0600, 0620 and 0640z.

The choice of 9452kHz as a freq is open to question by those of us who are not in the know at the transmitting end. Apart from it being in the 31m BC band and open to splatter or worse, recently it has been noticed the parking of data transmissions and XJT on there. Remembering that 9450 is also home to E25 one must ask if the placing of these two very efficient signal jammers is anything but intended.

PLondon used the post filtered 0600z sending to derive content detail from the intercept. Apart from the message detail above the hidden group was 36493 and gc+1 proven.

10852kHz 0620z 04/04/06 Complete message:

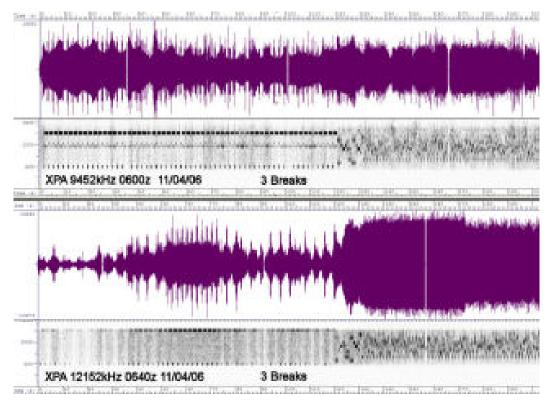

Note the entire message sent without fade or other aberration.

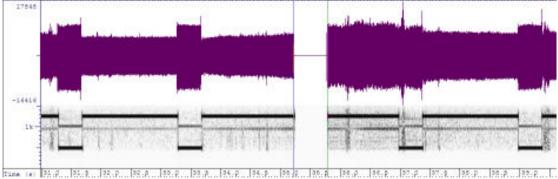

The 0600z sending was marred by splatter from a BC Station on 9460kHz and a heterodyne [2266Hz] was heard alongside the message but after post filtering the resilience of XPA against interference was seen.

On 07/04 PLondon switched the PC on for his analytical software only to find it wouldn't work; a pop-up declaring 'continue with install.' Luckily the v5 Spectrogram was still functional and did its duty, allowing PLondon to note the numerical content.. As 04/04 the same problems existed with the first sending, BC QRM but that was later removed using his newly installed software [tnx IT]! The others were weak with him but were received as better signals by JoA.

The sendings on 11/04 were variable, Again the 0600z was troubled by BC and a 2260Hz tone, 0620z was almost inaudible to PLondon at his work QTH. The 0640z was weak but provided measurable tones.

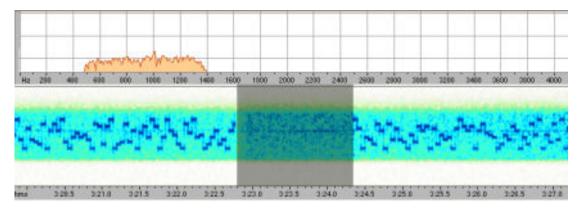

JoA reported like signals as well as monitoring a break "10852kHz 0619:53z [S7 QRN QRM-noise] A very short break in Intro. detected @ 0620:31z," but it would seem this break was prevalent in all sendings as the spectrographic print above shews. [Well done John]! Looking at the traces it would appear the breaks are approximately 10 secs apart in comparison. The hidden group was 98224 and 64x3+40-2 = 230 proved gc+1.

Magnified view of a break in transmission 0600z110406

All the morning sendings were problematical; the first two being very poor, 0600z XJT and BC QRM. 0620z QRN and noise. The last sending was the best at 20dBs strength although it was slighty troubled with a 1 and 2kHz hets. Both JoA and mndbs reported a break in the 0640z sending. This break is shewn below.

Gap in 0640z 14/04/06 sending

The 18/04 sendings were peculiar to say the least. PLondon reported the 0600z sending as the only one he was able to correctly receive [20dBs with BC QRM] with the 0620 and 0640z sendings virtually unuseable. RNGB reported his reception as being variable but stated the 0620z sending as his best whilst JoA reported his best as 0640z.

This wide variation is interesting as JoA's antenna is vertically polarized. His signal strength is also often better than that experienced elsewhere too. [Others' kitchen's, radiators and soft top cars not withstanding, JoA S].

64x3+12-2+202 to prove gc+1.

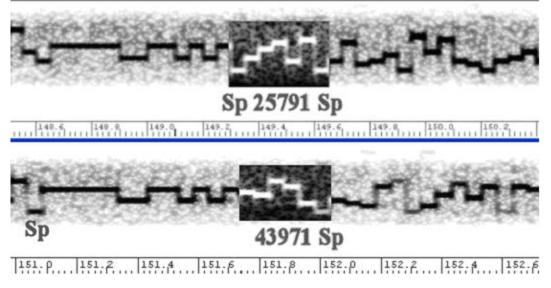

British Rail reared their ugly head in the form of Signal problems outside Epsom, or, a broken down train in front of the 0608 on 21/04; they just threw a load of excuses that probably meant the driver was still in bed - £116 a month for that sort of service. As a result PLondon was forced to contact JoA to make the observation for him – having fallen out of bed 65mins late he could not recall having set the autosys up for XPA interception. As a result of this comedy of errors PLondon missed the 0600z sending completely [would have caught it if the 52 bus actually ran to time – it hasn't all week] but set up for the 0620z and 0640z sendings. Both were terrible, low signals and fading with PLondon. PLondon contacted JoA who had just come in from his herb garden who stated that his signal levels for all the sendings were not too good – S9, S9+5dBs and variable S3 to S7.

On returning home PLondon discovered he had set the autosys the night before, the0600z and 0640z were not upto much but the 0620z was strong allowing analysis of the numeral content.

Good signals on 25/04 with a 253 group message 64x4-2=254 proving gc+1.

The last morning schedule sending for April on 28/04 was a peculiar one. JoA reported signal strength as: 9452kHz 0559:59-0601:59z Intro., 0601:59-0602:47z msg.[S9+25dB QRN]; 10852kHz 0619:58z [S9+30dB QRN]; 12152kHz 0639:59z [S8/S5 QRN] whilst PLondon at his home QTH noted different strengths: 0600z S9 to 20dBs, 0620z S9 and 0640z virtually NRH!

On looking at the waveform PLondon noticed there was no apparent hidden group, what he counted 64+52-2=114, exactly the right number except he had made a mistake [Tnx RNGB]. On checking the groups around the only 64 group separator there was a space tone [680Hz] between the last character of the separator and the next group:

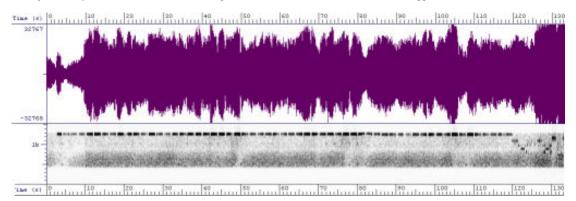

The top image shews the proceedings 0620z 280406 and the space tones and what goes on in between can be easily seen. The lower image is that taken from the 75 group xending of 11/04 at 2000z. Looking at the lower image one can see there is no space between the final tone of the 7 tone separator. The hidden group is somewhere in the 64 groups preceeding the separator; feasibly the last group prior to the seven tone character?

In the top trace the group preceding the separator always has a space between it and the separator – on this occasion, no space as can be seen on comparison.

April Evening Schedule

April evening schedule kicked off by using Sept 05 freqs and repeating the null message of 21st March. The first sending at 2000z was tainted by XJT as per the September log, the second 2020z was troubled by a BC station a few kc/s away and whose presence created a 2022Hz het tone that was easily removed. The third and last sending reached 35dBs at PLondon's QTH although the freq was being used for USB voice tx using FF language.

The first sending was noisy and PLondon used USB, tuning the intro m/s to their correct tone as can be appreciated below:

Perusal of the 2000z trace above reveals that although the sending was noisy the use of USB, which PLondon rarely uses for XPA, allows the measuring of tones etc.

Excellent sendings on 07/04; +30dBs for 2040z. gc+1 proven with hidden group 44705.

11/04 was readable throughout its schedule with the first two sendings trouble by XJT emissions. The hidden group was 43971 and gc+1 was proved.

Results for the evening sending were poor and incomplete; no doubt due to the smoke from JoA's bonfire ! Although a het was heard at 2000 and 2020z no variation of the tone was noticed – carrier up, no sending. The diagram below shews the 2020z sending and it can be seen the het is up for the right time, from around 2012 to 2022z for the close.

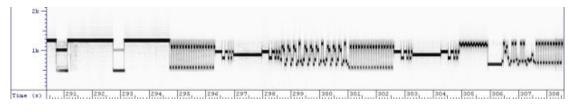

The last sending at 2040z sent a message but the signal was so poor PLondon was unable to accurately determine the gc, dk and the rest of the pars for XPA. Whilst tracking a few stations during the day it was noticed that conditions were less than useful.

The following sending on 18/04 started well at 2000z and continued straight across the schedule with signal strengths of 10 and 20dBs. 64+34-2+96 proving gc+1.

Completely different to the mornings sendings the evening transmissions of 21/04 were excellent with the exception of the XJT troubled 2000z offering. That needed retuning to 9103kHz for clear audio. 2020z had a 2024Hz het on it from the skirts of the nearby BC station, 'Galei Tzahal' whose line up included a hit from the Kinks; strange when you consider the programmes are aimed at the Israel Defence Force. [6973kHz]. A little post reception filtering and the tones were very good.

Not as good as those sent at 2040z on 5758kHz though. The sending was extremely strong, a great help considering the two data bursts and the weak Morse that was heard just before the XPA kick off. The signal strength was +40dBs and was banging on the endstop of PLondon's ICOM IC-R71E. PLondon mentioned to DoK after that the signal was so strong that with the effects it produced PLondon could have claimed it as a ground wave. 'Null Message Body shewn below:

Note how clear the background is and the clear definition of the signal trace. The final sending of April was a null message and a repeat of the previous Tuesday; coincidentally the first group was virtually the same as the ident!

NUMBER PREDICTIONS Gert's excellent predictions:

<u>ODDITIES</u>

Due to the varying nature of the reports on these bumps and squeaks ENIGMA 2000 will only report on their status as and when we receive reports:

Mazeilka[X06]

| From RNC | зB | |
|-----------|------|-----|
| 1st March | 1356 | 108 |
| | | |

814 tones 900/810/840/870/940/990Hz

18th 1900 8131 tones 800/980/900/940/870/840Hz (QRT at 1907)

From PoSW:

Only one X06 6-Tone "Mazeilka" found in the last couple of months; -

20-Apr-06, Thursday;- 1752 UTC, 12,195 KHz, X06 at strength S7 to S8, vanished completely just before 1755z, listened for three or four minutes afterwards, nothing further heard. This was the first X06 I had heard since 4-February. However there was a strange two tone transmission heard a few days earlier on Sunday 16-April at 1948 UTC on 9,333 KHz. This was an S9 signal and consisted of two tones, quite high pitched, with a short gap of plain carrier being transmitted over and over. The tones stopped for a few seconds at 1951z then started again. Suddenly went off, carrier and all, 1954z. Appeared to be transmitted with the lower sideband suppressed and had a slight background buzz - like X06 - and I wondered if it was *Mazeilka* with a fault in the tone generating department. The carrier came back around 1958z, off again after 2000z, up again 2003z and off for good after 2004z

ENIGMA 2000 Article

We continue with Thomas Wagner's most interesting true story, with his full permission. Thanks Thomas,

IF IT HAD NOT BEEN FOR 15 MINUTES: PART 3

The instructions that Herbert had memorized described the dead letter box. It described how to get there in several different ways, how to recognize the location if found, even the compass direction and approximate distance from a known point in a Berlin Park.

On July 10th, two days after the visit, Mr. Ritter once again showed up at my uncles house. "We need you to write a letter to your sister" he said. The letter contained a cryptic message : " The planned vacation that we had discussed can take place on July 25th. All participants agree with that date.."

Stiller is on vacation with his wife and kids, unbeknownst to my mom who thinks he is in Budapest Hungary on business. He phones her on July 19th and gets the news. Cutting his part of the vacation short, he returns on July 24th the East Berlin. Mom travelled to Berlin and met Werner. On July 25th both went to a specific park looking for whatever is to be found at the location that had been memorized earlier. "That was very suspenseful " said mom " I was thinking that finally we are getting somewhere. Finally there is progress ".

Werner and mother walked a certain distance from a statue toward a notable tree. When the distance had been covered they were to look under a pile of leaves in a bit of a natural looking depression in the ground. The place was marked with two small bricks. The message didn't specify what they should look for or what would be sent.

It had begun. From this point forward there was no turning back.

Mother and Werner were asked to go to certain park in Berlin, specifically they had been given certain landmarks within the park but no further details as to what might be found there. Mom promptly caught a train and went to meet with Werner. Together they made their way to the park and carefully followed the BND's instructions.

There was the statue.... and a certain number of steps away from it wasnothing! Nothing except a pile of leaves. A pile like any other that had been swept into a small mount by the wind. Werner bent down and riffled through the leaves. He felt something hard. Quickly brushing off the top coat of loose leaves he found an old piece of weathered wood. A branch or a piece from a nearby shed. It was dark, wet, and looked as though it had been there a hundred years. Werner slowly pulled the wood from its leafy bed and flipped it over. There it was! The bottom of the small plank contained a rectangular cutout that was closed with a tiny metal latch. Werner hid the wood in his overcoat and together they returned to a STASI safehouse, actually more of a "safe apartment' that both used for rendevouz's. How ironic - here they were all excited, their hands almost shaking, in a STASI apartment about to open a communique from the enemy.

Werner opened the small latch and pulled a small bundle from the wooden plank. Tightly wrapped in plastic, to protect it form the elements, the bundle was approximately the size of a postcard and about 1/4 in thick. When the plastic was removed the package revealed several items.

It contained 10 pre-addressed envelopes, an equal number of pre-written letters, it also contained invisible ink cartridges and a one-time use pad of cyphers in the form of small mircrofilms.

Covering everything was a letter of introduction from the BND. Mom still remembers the friendly tone with which it was written. The letter contained instructions for the use of the cyphers, radio frequencies and other information.

The message as it was contained one big logistical problem. In order to listen to a short-wave radio broadcast on the frequency described in the letter, one needs a short wave radio that is capable of receiving the frequency of this broadcast.

European radio frequencies are organized a little bit different from the US. For example, certain stations like the BBC in Great Britain or Deutsche Welle in Germany use short-wave and ultra-short wave frequencies, which allowed their transmissions to travel further across the world. There are several different spectra of short wave radio frequencies that can be used by commercial stations and other "transmitters", such as the various

intelligence services operating in Europe. The most famous intelligence funded radio operation was <u>Radio Free Europe</u>. Yes I know the website very prominently states that this is a privately funded enterprise but everyone knows that a large part of its funding, if not currently then absolutely in the past, has come from the US government. By the way, there is nothing wrong with that.

Unfortunately the small transistor receivers that one could purchase in East-Germany absolutely did not carry the band that was inidicated in the dead letter drop message (3,7 - 4 Megahertz).

That, in short was the nature of the logistical problem. We were not professional agents. We had no training and consequently neither my mother nor Werner knew that this was an indication of some of the bumbling keystone cop behavior that we could expect from the BND. In later years we were told that a professionally run operation would have known about the problem of East-German receivers and supplied an appropriately configured radio before sending any transmissions. Leaving us to fend for ourselves created an increased risk of exposure. Interestingly, by all accounts Werner was as dumbfounded by this situation as mother had been, which illustrates how much of a desk bound operative he really was.

The situation was quite stressful and perplexing. Time was running out and the day for the first scheduled transmission was approaching ever more quickly. Luckily my mother found a solution.

Our hometown had two Intershop's - small stores that sold Western goods

GRUNDI SHORT WAVE RECEIVER

for hard currency. She noticed that the Intershop just happen to sell a receiver of the type we needed. Mother used a portion of the tip money that she had received over the years in hard currency, took yet another train to Berlin and visited an Intershop in the county's capital to purchase a West German "Grundig" or "Telefunken" short wave receiver.

It is hard to blend into a crowd when a store does not have much traffic. Intershops drew many window shoppers but few actual customers. Nonetheless, Mom tried to be as inconspicuous as possible. And just as she was beginning to relax and feel a little bit confident about her purchase transaction, which was progressing quite fast and efficiently, the sales person turned to her and said: "We need to complete a registration form required for the purchase of this radio. Where do you live?". Mom's heart skipped a beat. She quickly tried to come up with an answer. Which address?

Which address? Of course she couldn't give out our actual home address. It would seem logical and less suspicious if the item was bought by a Berliner. In the end the only address that came to mind was that of a family friend. Crossing her fingers in hopes that no one would bother to check it out, Mother proceeded to give out the incorrect information.

You know, radio waves have one really wonderful quality - they don't know what borders are. They have no concept of countries and are not hindered by walls, fences or guard towers with powerful spotlights. And the infamous automatic gun emplacements along the Eastern side of the border, designed to automatically fire a barrage of rounds right along the fence if tripped by a defector, were no problem for radio waves.

As a result, many folks in East-Germany would listen to West German radio stations and watch West German TV.

Having obtained the radio, mother waited patiently for the designated transmission day. She explains that the first few times were terribly hard. She had the radio under a pillow - no earphones were available. So here she was with a pillow over her head and over the radio, the frequency fading in and out - it took her a full five hours to get the first message down and deciphered. (The reason being that the transmission could fade out and if one small piece of it could not be heard you'd have to start all over again).

As mom explains it "Our code was 6-4-0. Twice a week, several times a day the same message was delivered. "

You may ask what about this business of encoded messages? How is that done?

Each message that was transmitted by the West Germany included a note of when to expect the next message. It didn't matter if there was any actual content in a given message. If there was nothing to be passed on the announcer of the transmission would merely say " zero columns " and indicate when the next transmission was to happen.

The messages themselves consistet of columns of numbers. Usually five digits to one group or column. One aspect of this entire message business has always struck me as funny. When we first began moving the radio's station selector button across the short wave band it was very hard to figure out if the station that was transmitting at a given pint was actually the one we needed. For whatever reason, hardware related or perhaps signal strength related, the station would not exactly line up with its supposed location on the dial.

To make matter worse, there were 2 German espionage channels right next to one another. Both at similar signal strengths, both using women announcers and both transmitting a steady stream of numbers: "5,7,0,1,9 break 14,87, 23, 12, 78 break ..."

I don't know why they were located in this manner. Perhaps it was someone's idea of a joke. So as the time for the first transmission drew near, Mother and I hunted up and down the dial in an attempt to isolate the correct station.

If we missed the first couple of sentences in the transmission we would not know if it was addressed to us or someone else, and hence we might miss the entire thing along with the indicator of when the next message is to come. Talk about stress. Finally we thought we found it and just as we were getting ready to relax I noticed how the lady announcer pronounced the number five. In German it sounds something like "Fuenf". Short and to the point. However, this particular announcer called it "Fuennef" - drawing out the word and almost adding its own ending to it. This pronounciation was distinct to a dialect found in East Germany. Quickly in great panic we switched to the other German language station next to it - just in time to hear the announcer say "The next message is for our friend 8754. It consists of 35 groups of type Z. The message starts now: 87,34,12,13,30,12 break" I don't recall the exact numbers.

Once the transmission had ended we would make a clean copy of all the number groups and break out the appropriate package of cypher keys on microfilm. The West German package that had been so skillfully hidden in the dead letter drop included several sets of cypher microfilms. Now mind you this was not one of those microfilms that you can commonly find in a library. The strips of film that had been sent to us were approximately .25 in tall and 3 in. wide.

This decyphering system itself was quite ingenious. The code combinations were "throw away" cyphers based on some algorithm that allowed for a large number of key combinations. A single "pack" of cyphers for each transmission consisted of 2 or 3 small lengthy strips of micro film.

With the clean set of number groupings in hand we looked for the appropriate key strip - for example "Z" and place it underneath the number columns. Starting at the left of the micro strip we would copy yet another set of numbers onto the pad. Next the numbers were added which gave us yet a third set of columns. At this point we placed the second microfilm underneath these groups to find letters that corresponded to the numbers. The whole thing when done looked something like this:

| 87 | 0 | 12 | 13 | 30 | 0 | 12 | 12 | 16 | 5 | 8 | 3 | 0 | 99 | 21 | 0 | 55 | 76 | | | |
|----|---|----|----|----|---|----|----|-----|----|----|---|---|-----|----|---|----|----|---|---|--|
| 11 | 0 | 10 | 10 | 9 | 0 | 12 | 12 | 9 | 9 | 8 | 5 | 0 | 1 | 45 | 0 | 5 | 10 | | | |
| | | | | | | | | | | | | | | | | | | | | |
| 98 | 0 | 22 | 23 | 39 | 0 | 24 | 24 | 25 | 14 | 16 | 8 | 0 | 100 | 65 | 0 | 60 | 86 | | | |
| | | | | | | | | | | | | | | | | | | | | |
| Ν | Е | Х | Т | N | Ν | Е | S | s (| G | Ν | 0 | V | Е | Μ | | В | Е | R | 1 | |

The beauty of a system of this type is the fact that both the first and second set of values can be changed by the crypto generator and only the combination of both will result in a legible message. At the same time as far as I recall, individual transmissions would rarely use the same code in successive messages.

Below is a picture of a Russian / East-German Air Traffic and Radio Monitoring Array located on top of the highest mountain in East-Germany (Brocken Moutain in the Harz range is 3,300 ft high). This array is the most likely tool used by the STASI to monitor the message traffic directed at agents working on behalf of West Germany and Western Europe.

For a bit of history, the Brocken is located about 10-20 miles East of the border with West Germany. It is the highest mountain in an area of several hundred square miles and therefore became a logical obervation post, first for the Soviet Army in 1948 and later for the East German government. At its busiest time this location was staffed with over 100 technicians

The first few messages that came across were more than anything designed to ferret out any sort of trap. The BND was very careful and wanted to make sure they weren't being set up by the Stasi. Hence the questions pertained to Werners identity, his job, his office his section of the department. All of this could be verified by the BND indepently.

Have you ever noticed that human beings can get used to the most absurd situations and in a relatively short period of time feel as though the most unusual circumstances are normal? Whenever you get a faster computer, pretty soon it seems normal or slow. Whenever you get a faster verhicle, it doesn't take long and you are used to it.

This seemed to be the case for us. Never mind the absolutely fantastic set of circumstances that we found ourselves in, it became something of a routine. If we had known that at any given point several dozen agents where combing the land for us, it certainly wouldn't have been routine. However, we lived in blissful ignorance.

Growing up in East-Germany, the people I knew fell into two rather large categories. Those who didn't believe the governments propaganda and generally knew, or suspected, that the entire country's political structure was one big mess, and those on the opposite end of the spectrum, who genuinely believed that the government was correct. As is the case everywhere in the world, like attracts like. The kids who came from households of Party officials or otherwise government connected parents would pretty much "tow the party" line. The rest of us went along with the dominant paradigm out of enlightend self-interest. That meant in front of the authorities we would pretend to be good citizens. Of course this pretense only went so far, considering we were trying to dress as Western as possible, listen only to West-German radio and watch only West German TV. I remember a funny incident that illustrates how different our little town in the mountains was from large parts of the rest of the country.

Because we had contact with Western tourists and businessmen, there was a very lively black market thriving in my little hometown. If you had the right connections you could get West German records, by paying 50-100 East German Marks. For the purpose of this disussion, without getting into details of exchange rates and Cost of Living Indices, it felt to us as the equivalent of \$50.00-\$100.00 might feel to an American. If you knew the right people you could get Levis jeans and jackets as well as other Western goodies. So one Saturday morning I was making my way across town, decked out in my usual jeans, Led Zeppelin T-shirt and jean jacket, when a young man who looked to be in his mid-20's approached me. I could tell he had just recently arrived in town on vacation. He asked for directions to one of the sights. As we walked along and discussed his intended hike for

the day he stopped, turned to me and

said: "You know this is going to sound odd but I will ask it anyways. Everywhere I turn, people are dressed in jeans. What do you guys do up here? "Perhaps he was from a smaller town or perhaps he hadn't been to East-Berlin which certainly rivaled my hometown in "westerly" dress.

Had I known about some of the statistics that caused the MfS (Stasi) to bring their bloodhounds onto our scent, I certainly would have been much more worried at this point. You may recall that I mentioned earlier one of the methods we communicated with the West was through the use of pre-written letters, in which we wrote our messages using invisible ink, yes thats right - good old invisible ink. Many kids learn how to make one form or another as part of experiments or as the result of reading books. I just recently found out that the Stasi district office in charge of the south-easterly portion of the country (which coincidentally was the area from which most of our letters were mailed), would literally open 1,500 -2,000 letters addressed to

Western countries each and every day. That's about half a million letters - opened, read and most frequently micro-filmed for samples of handwriting. So the government broke its own postal law about 500,000 times a year.

If your relatives wanted to help and send some cash to you, the MfS would simply keep it. And to top it off, 3%-5% of all letters originating in the West would never make it to their addressee's.

Come to think of it, I got lucky in that respect as well. Just a year earlier, for the record breaking period of three whole letters, I had a pen-pal in the US. A friend of mine worked at the local post office in the summer and had written down an American return address he had seen on a package.

He wrote a letter to that address. Turns out the person who mailed the package from the US was a school teacher. She took the letter to her class and several kids wrote back asking to hear from East-German school kids. How cool was that ?!

I will never forget how hard I worked on producing 10 lines of poor broken English which earned me an answer letter from Nancy Julginity of Springfield PA. After much wrestling with the dictionary I deciphered that she was 16 years old, enjoyed school, loved Bruce Springsteen with a passion and could not understand how a system like the one I lived in could continue to exist.

I tried to explain it to her but was never able to get the words added up correctly in English. On the bright side, my very first record I bought in the West was a Bruce Springsteen Album released only in Europe called "Working Class Dog". It had a Pitbull dressed in a white shirt and red tie on it I think. I've been a Bruce fan ever since.

Remember how you felt as a kid when you couldn't wait for Christmas to come? Well, it was pretty much the same sort of expectation with which I was hoping that soon , very soon , we could leave for West Germany.

By the way, I think I mentioned before that East-Germany in the late seventies was in many regards similar to Western countries in the early sixties. Actually, come to think of it, there were some aspects that I really wish I had available for my daughter as she grows up in Los Angeles in this day and age. For example I could go hitch-hiking as a 16 year old teenager without worries of being accosted. Even more, as a young boy my friends and I would play in our neighborhood or across the entire town without fear of crime. The worst criminal behavior that we might see - if you call it that would be a couple of drunk middle aged men, walking down the street arm in arm on Father's Day, singing bawdy drinking song. Or better yet, watch those same sloshed citizens loose all inhibition and jump into the town fountain for an impromptu bath.

Unbeknownst to us, this period entailed a great deal of hectic activity for the BND as well as an unforeseen player in this game - Lieutenant-General Guenther Kratsch. Chief of the "Spionageabwehr" (Counter Espionage) department of the Stasi.

Now onto PoSW's 'Items from the Media':

Items of Interest from the Media;-

The Mail on Sunday of 26-February reported that M15 has stopped spying on Marxist students and trade unionists as they are no longer considered a danger to national security. According to Jason Lewis, Whitehall correspondent, "As it faces up to the threat of international terrorism in the wake of the 9/11 and 7/7 attacks it has dropped all so-called "reds under the bed" operations. The "enemy within" surveillance monitored the activities of hundreds of radicals.....including some who went on to be Labour Cabinet Ministers. Secret files on Foreign Secretary Jack Straw classified him as a subversive when he was a student leader in the sixties". There is a photograph of "Hapless Jack" Straw taken in the Sixties when he was a student "leader" and he has the same shifty, devious look about him as he does now. Always puts me in mind of a small-town used car salesman who has just spent the afternoon winding back the mileage indicators on all of the vehicles in his showroom and can hardly believe he has gotten away with it. A couple of other names of those regarded as a threat to the State a few decades ago include Peter Mandlesson who was bugged by M15 for three years in the late Seventies and Peter Hain who conducted a campaign against the then South African government. There is also a mention of the spying activities conducted against trade union leader Arthur Scargill who led the coal miner's strike in 1984, one of the great dividing lines in British domestic politics because it marked the end of the trades unions as a serious force in the country. I remember an incident concerning the miner's strike which occured several years afterwards when there was a news report that two individuals fairly high up in Mr. Scargill's union executive were informers for the intelligence services and had been for many years - I think they were given new identities and a generous financial package by a greatful government who were able to break the miners because of the inside information they provided. Mr Scargill was pounced on by reporters as he left a meeting and was asked by one of them "Mr Scargill, what is your reaction to the reports that two of your trusted colleagues were M15 informers". Without a moments hesitation Scargill replied "I'm surprised there were only two".

On a somewhat related theme there was much discussion in the media as to whether or not there was a plot to overthrow Prime Minister Harold Wilson who led the Labour government in the Sixties and again in the mid-Seventies. There have been many rumours about this over the years and was touched upon by Peter Wright in his *Spycatcher* book. The story goes that a plot to overthrow Wilson had been prepared by MI5 with a collection of businessmen and senior millitary men who would form a government with Lord Mountbatten as its head. The reason for such drastic action was the supposed mess the Wilson administration was making of the economy and the belief that Wilson himself was a Soviet agent. The events formed the basis of a drama-documenary put out by BBC television on March-16 based on conversations Wilson had with two BBC journalists in 1976. I must say, having lived through the Wilson years he didn't seem to be all that much of a rabied communist. The big overseas news story in the second half of the Sixties was the Vietnam War and Harold Wilson appeared to be one hundred percent in favour of what the Americans were doing although he stopped short of sending British troops despite great pressure from President L.B. Johnson. Had he given in to the Americans we might have had somewhere in London our own black granite memorial with thousands of names on it just like they have in Washington.

The death of John Profumo in early March was the cause of much comment in the press. The Profumo affair was a major news story in the early Sixties when the then Secretary of State for war got himself mixed up with some ladies of easy virtue most memorably a certain Christine Keeler who, when she wasn't servicing Mr. Profumo was busy dispensing her favours to Yevgeny Ivanov, the naval attache at the Soviet embassy which, at the height of the Cold War, had obvious security implications. In 1963 Profumo stated in Parliament that there was "no impropriety" in his relationship with Keeler but a few weeks later he appeared before Parliament to say that he had misled the house and that he would resign And resign he did, an action which would be unthinkable with any of today's politicians. Who could imagine any of the current self serving bunch resigning on such a matter ? And he didn't re-appear on the board of directors of companies seeking fat government contracts; instead he went into charity work in the poorer areas of London and became highly regarded. Whatever his faults he atoned for his sins many times over and notwithstanding the threat to national security of his actions I am sure he caused far less damage to the wellbeing of this nation than any of the politicians who have been in power over the last two decades. One of the best sources of of the salient facts on the Profumo affair can be found in the book "Espionage, an Encyclopedia of Spies and Secrets", compiled by Richard M Bennett, published by Virgin Books Ltd.

Update on the Lockerbie disaster;- the *Sunday Express* of 9-April carried an interesting piece on a possible cover-up in the aftermath of the event which took place on December 21 1988 when Pan American Flight 103 exploded over Scotland killing 259 people on board and 11 on the ground. According to a police surgeon involved in the case, Dr. David Fieldhouse, a body went missing from the scene which led to the wrong man being jailed for the atrocity. In 2002 a Libyan was found guilty of the bombing and sentenced to a minimum of 27 years in prison. The allegation is that the missing corpse was removed as part of a CIA plot to conceal the identity of someone who should not have been on the plane. The article says "Many close to the investigation believe it was Syrians, not Libyans who planted the bomb after infiltrating a botched CIA operation that allowed terrorists to send heroin across the Atlantic in return for information about American hostages in Lebanon. The story revolves around the fact that Dr. Fieldhouse helped to recover and tag 59 bodies of the victims but later it turned out that only 58 were listed with one of them being removed from all official records. There were reports at the time of a coffin-shaped box being shipped out of Carlilse and there were claims that CIA agents dressed in Pan-Am overalls had combed the countryside for luggage belonging to a number of dead American intelligence agents who had been on board. A woman police officer reported finding a CIA badge in the debris but was ordered not to make any record of it.

"Better late than never" - proverb. On 3-March several papers carried the story of an intercepted message from the Second World War, encoded by the famous Enigma machine, finally being decoded 64 years later. The *Daily Express* reported in a piece by Mark Reynolds that "Three coded messages which have remained undeciphered since the Second World War are finally being cracked thanks to thousands of computer owners. The German codes baffled Allied cryptographers during the war. But one of the messages from a Nazi U-boat captain has now been revealed through code-breaking software on a grid of PCs linked to the internet" The message rendered into plaintext is a fairly routine communication from Kapitanleutnant Hartwig Looks, commander of the U264 and dated November 25 1942 on the prevailing weather conditions together with course and speed taken in the aftermath of being on the receiving end of a depth charge attack. The story continues "The succesful attempt to crack the code was initiated by German violinist Stefan Krah. He wrote the program and publicised it on the internet, attracting the interest of about 45 people who allowed their computers to be used. In the end the project snowballed, involving 2,500 terminals around the world.

New radio talk show host;- the London based commercial radio station Talk Sport has recently aquired a new presenter in the form of Mr. George Galloway, former Labour Party Member of Parliament - long since fallen out of favour with Mr. Tony BLiar and now the only "Respect Party" MP, and of course sometime hand-shaker of Saddam Hussein. The output of Talk Sport Radio as the name suggests is largely concerned with sport - which in the UK means football - and a great deal of its peak-hour output is dedicated to the task of hyping up the whole money-making business for the benifit of its shaven headed, tatooed and ear-ring wearing followers. However, there is only so much crap that can be spoken on this subject and in the late evenings the station concerns itself with various other topics. The whole talk radio format is something which has been copied from the USA where no doubt it works very well, less so in the UK where the laws of slander and the recent legislation restricting what can be said in public greatly limit what can be discussed and indeed, much of the programming these days is in the form of a contrived angry rant against various aspects of the law as applied to motor vehicles, especially with regard to parking restrictions and speed limits as enforced by automatic cameras. Nevertheless, George is the exception and makes a far better job than most of his fellow presenters when he does his two hour slot on Saturday and Sunday evenings, modestly entitled "The Mother of all Talkshows", covering many serious subjects and engaging in lively debate with the callers.

[PL's comment:I am not a lover of anything sport; I'll follow Cricket and a bit of Rugby but I don't really care two hoots for the rest of the nonsense. I discovered TalkSport one morning at when fed up with the rhetoric from my usual haunt of 97.3 I thought I'd tune on the MW band. I landed on 1089and Mike Mendoza – interesting show at 0400 whilst I take a shave. Then there is like presenters in the evening [football nonsense permitting] and George Galloway Saturday and Sunday. I listen to GG on my minidisk during the week – makes crappy journeys come alive – especially when some punter rings in, attempts to make life difficult for him and slags GG off only to be told he can expect to hear from GG's lawyers. It really is entertaining.

The only downside of non-sport listening is Actor Steve Hartley's- ex Ch. Supt Tom Chandler in The Bill continual voice - very annoying indeed].

Thanks PoSW - and now onto our continuing NEWS & ITEMS of INTEREST penned by KW and a variety of others:

FLASH ENIGMA 2000

NOT CONFIDENTIAL CRYPTO MARKED ~~ KLGTY CLEAR

BEGINS:

The Army is to get a new air-portable battlefield communications network called FALCON under a contract worth in excess of £200m, Minister for Defence Procurement, Lord Drayson, announced yesterday.

BAE Systems Integrated System Technologies (Insyte), has been awarded the contract to design and manufacture FALCON which will equip senior commanders with one of the world's most advanced and powerful digital communications networks for controlling combat operations at corps, divisional and brigade level. It will have up to 50 times the data throughput capacity of the systems it replaces and will massively improve the Army's communications network and reduce the number of Royal Signals vehicles and personnel needed to support a major headquarters. It is due to enter service in 2010.

Lord Drayson said: "I am very pleased to announce that we have awarded the FALCON contract to BAE Systems Insyte for this hugely important system. Its delivery will provide the Armed Forces with the modern, secure communications infrastructure required for effective operations". "FALCON will be a vital part of the network-enabled operations that will help our front line commanders cut through the fog of war and ensure that they have the ability to communicate quickly and effectively across the battlefield. Studies have shown that better and faster use of combat information gives our Armed Forces a major advantage over any likely opponents and FALCON, integrated with the Bowman tactical communications system and the Cormorant command system, will give them that crucial advantage. It fully supports our future procurement policy as laid out in the Defence Industrial Strategy"

FALCON will provide the battlefield communications infrastructure to support the Army's command systems. The Bowman tactical system will feed information into FALCON, which will be able to link back to UK headquarters using the Skynet 5 satellite communications system. FALCON will replace in-service systems such as Ptarmigan, Euromux, and the RAF Transportable Telecommunications System (RTTS). The FALCON network will permit transmission of large amounts of data between Army Headquarters and battlefield commanders. The system will be deployed to and operated by Royal Signals Units and will allow significant operator reductions over the existing Ptarmigan system.

The FALCON project is managed by the Theatre and Formation Communication Systems project team, based at the Defence Procurement Agency in Bristol. The team is led by Martin Sheppard

In line with the Defence Industrial Strategy; the programme will sustain a cadre of engineers that understand our systems and requirements in order to support our equipment in the future. It also maintains our capability to produce equipment over which a measure of sovereign control is required (e.g. cryptographic material). FALCON is key to the "Resilient Information Infrastructure" of Network Enabled Capability (NEC) by providing the modern, secure communications infrastructure required by deployed formations and operating bases. Blog info

Last time we mentioned a blog run by Mr Michael Smith, a convicted spy. It came to our notice that The Ealing Times actually printed further details of Mr Smith's view of his conviction:

http://www.ealingtimes.co.uk/display.var.704285.0.0.php

For those without computer access:

'Spy' out of the cold By Susan Greenwood

The Cold War may be becoming an academic subject but for a former Kingston resident fighting to clear his name, it is very much a hot topic.

Mike Smith, 58, has spent 10 years in jail accused of passing on defence secrets to the KGB, the Soviet Union's infamous intelligence service, during the early 1990s.

But he has always vehemently protested his innocence, claiming an unfortunate series of coincidences, bad decisions and an incendiary political climate contributed to his downfall.

He believes he was made an ideal scapegoat because of his past involvement with the trades union movement in Kingston, as well as the Young Communist League, which saw him take trips to Moscow in the early 1970s.

Mr Smith admits to industrial espionage, selling information while working for the General Electric Company at the Hirst Research Centre in Wembley and amassing around £20,000. But he was adamant that he was not selling secrets to the Soviets between 1990 and 1992.

He said: "I am trying to discover and expose the full story behind the conspiracy that led to my conviction of supposedly spying for the Russians and have been trying to make noises about this for some years. I just want to sort it out and clear my name. "It has changed my whole life, damaged my possibility of getting a job and led to the end of my marriage."

Central to Mr Smith's conviction was the character of Viktor Oshchenko, his alleged KGB contact who defected to the UK in July 1992. Mr Smith denies any contact with Oshchenko.

He said: "It's possible I could've met him, because a guy I knew in New Malden brought a group of Russians down to a social gathering. But that was in the 1970s not the 1990s and I don't know what's happened to him now."

Mr Smith's appeal in 1995 was turned down, claiming treachery is treachery and it must be punished'. For more information on the case go to www.parellic.blogspot.com.

"How Al Qaeda Stays Connected"

According to Pakistani intelligence sources, the use of free and anonymous e-mail services such as Yahoo! or Hotmail by al Qaeda operatives is widespread.

To avoid being intercepted, the messages are not sent but saved in the account's draft box.

They can then be retrieved by other operatives by simply logging on to the same e-mail address — with a shared password.

This technique makes it impossible for intelligence services such as the British GCHQ or the American NSA to read these messages without hacking into the servers themselves, which they are legally prohibited to do."

What tripe! Intelligence held in the draft box must flow through a compromised medium (comm network) to reach any given receiver.

The intent of the disinfo is to get the amateurs to keep their messages in their draft boxes. Whenever the same draft box is accessed by a computer, the IP is logged by the email server. Then, a mongo link can be drawn up to study the pattern and figure out who is in charge of the amateurs. http://mediachannel.org/blog/node/3665

Army Colonel faces trial on charges of espionage

Colonel Deepak Raina of the Indian Army faces court martial for allowing a Pakistani spy to access top-secret war plans.

He is the highest-ranking Indian officer to face spying charges.

It is also one of India's biggest espionage cases since the Sambha spy scandal in 1971.

Raina, who was the colonel operations at Tezpur, 4 Corps headquarters in Assam, had asked Lance Naik Javed Khan to copy some top-secret documents in July 2005.

Khan did download the papers from a restricted computer for Raina but kept a copy for himself, which he then passed on to his father Hanif. Hanif, a retired IAF sergeant, was believed to be working for Pakistan and was later produced in a local court in Guwahati.

War plans

The documents contained information about India's response to a nuclear attack, entire plans of missile deployment across the nation, reshuffle and redeployment of all infantry units in the army between October 2005 and March 2006.

It also included tactical and strategic sector-wise deployment of troops on the India-China border under 4 Corps.

Raina's boss Lt Gen AS Jamwal wanted the documents copied as he was raising a new corps in Himachal Pradesh.

Raina is charged with violating procedure by allowing Khan to access to classified information. He is being held responsible for not being vigilant enough.

The question is if Colonel Raina is guilty of being too casual with his work or something more than that.

http://www.ndtv.com/topstories/showtopstory.asp?category=National&slug=Army+colonel+faces+trial+for+espionage&id=18969 Brought to noice by Jmm [tnx] Cryptic tips for students Gloucester Citizen 10:39 15-Mar-06

It Could hardly have been a more apt school to provide lessons about the secret world of electronic espionage. Youngsters from the Crypt School in Gloucester have been learning about the cryptic world of Cheltenham's GCHQ eavesdropping base.

The school hosted a GCHQ morning for Year 9, 10 and 6th form language students.

GCHQ, the Government communications headquarters, sent a team to the senior school to talk about the importance of languages to their day-to-day work.

Pupils took part in a series of workshops with the team, which gave them the chance to find out about GCHQ, hear about languages in the military and gave them a taste of Chinese, Japanese, Arabic, Urdu and Greek languages.

The school is trying to get more pupils to take up languages and GCHQ staff met students last year.

County councillor Joan Nash, cabinet member for schools, said: "Staff of the Crypt School and of GCHQ should be congratulated in arranging this opportunity for pupils to talk about the importance of languages in the workplace.

"Opportunities such as these, give pupils useful information to take into account when they are selecting subjects for later examination courses and career selection."

Penny Krucker, head of international education at the county council said: "I am delighted that one of Gloucestershire's top employers is showing such interest in languages in our schools.

"It is great to see such a time commitment by GCHQ to inspire and support young people's acquisition of languages."

[Sent in by Jmm]

Makes you wonder why the JSSL closed. Anyone with an interest might like to take a look at 'Secret Classrooms', Harold Shukman and Geoffrey Elliott..

Hawker P1127

This version of the Harrier Jump Jet can be seen at Bletchley Park National Codebreaking Centre. [Colossus rebuild bldg seen behind].

In addition to this there are exhibits to interest any ENIGMA 2000 Member.

PLondon's favourite is Hut 1, the Diplomatic Wireless Exhibition.

The cover pic on NL33 was the 6 tone Piccolo Unit, which can be seen at weekends in Hut 1 DWS Exhibition.

The Hawker P1127 was the project name of the harrier Jump Jet, perhaps Britain's most prolific Post WW2 jet fighter. Many a schoolboy bought the Airfix model or Dinky Toy or added it to his Vapour Trails display.

It saw action in Britains last Colonial War in 1982 when we sorted out the Argies over their claim to the Falklands – or the less attractive Malvinas as the argies renamed it. [*I recall seeing all the cans of Corned Beef untouched on supermarket shelves* – '*Produce of Argentina' became, 'canned in Brazil' or the rather direct 'Argies are barmy, send in the Army' pained along the Auxiliary Fire Station wall in Old Town, Croydon*]. Apart from Argies and Malvinas another word entered our language; viffing. Viffing was an acronym from the RAF term Vectoring In Forward

Flight. In other words whacking the brakes on and letting a missile go past [or your opponent] before destroying it.

The Metro of Tuesday 28th March on Page 25 showed an aerial photo of 1200 naval personnel and 50 school pupils bidding farewell to to the Royal Navy Sea Harrier FA2 jump jets at Yeovilton as they were taken out of service.

PLondon met the Sub Lt at a RN Dockyard who developed the ski jump used for fuel efficient take-offs – he also left a damn good bill in the Officers Mess at HMS Vernon too but the least said about that the better.

[Alongside the pic about the jump jets a prominent piece was placed that accused Ken Livingstone, London's Mayor, of calling The US Ambassador a 'Chiselling Crook' because of his refusal to pay London's congestion charge. Apparently, Mr Tuttle runs one of America's biggest car dealerships. This was recognized by our Ken who then called Mr Tuttle 'a salesman who was a friend of Mr Bush. On 06/04 PM Bliar – no doubt desperate for votes as well as to lose certain remaks about his relationship with Bush announced he supported Ken and the charges – the UAE

Embassy has apparently paid the charges asked for as Ken stated he looks forward to clamping Mr Tuttle's car]. Apart from the removal of the Harrier from Yeolvilton [PLondon and DoK once knew a LtCdr who was the ATC there] a recent article shewed the Paras marching out of Dover on their way totheir Welsh billet. Wonder if this is a land sale?

An American led attack on Iran's nuclear installations is all but inevitable...... But Iran has the 'Hoot'

So started a short in the Sunday Express 2nd April 2006 which mentioned that this possibility is due to be discussed at a top level Whitehall meeting as relations between the west and Iran continue to deteriorate. [They've got oi!!!!].

The very next day a variety of papers, mine was the Metro, carried the story about Iran's successful test of a high speed torpedo that can do 224mph [360kph]. It is capable of destroying large warships and submarines but it is not known if the Hoot can carry a nuclear warhead. Rice and Straw on North of England walkabout

Condoleezza 'what a handle' Rice and Jack Straw [or as a certain young man calls him 'the Demon Headmaster] visited Blackburn and Liverpool where residents made their feelings quite clear about the Iraq War [and didn't Mr Mayor look sick?]. Then wanting a safer place they flew to Iraq to have talks with Mr Jaafari, who they feel is not up to uniting all Iraqis.

In the Metro Codoleezza 'what a handle' Rice is reported as suggesting that in a comparison between Iraq and Iran that 'the circumstances are different.' Dead right Ms Rice – this lot will really fight back, just like North Koreans and that's died a death lately too. Does N Korea not have oil then?

What's your password?

Plondon was settling into the last day before a couple of day's leave and was pondering on the lack of interesting newspaper job advets. Then he saw the ad on P36 Metro 29/03. What's your password? It declared on behalf of MI5, the Security Service.

The job itself is for Service Desk Analysts educated to A or GNVQ Level in an IT subject. You do need a good grasp of MS Windows and MS Office though [Wot! No Linux?] Not surprisingly no applications via Capitas – now its Harvey Nash, but remember it's all 'A matter of national security!' Wonder if this is part of the screening of all data messages etc or just to keep their own pc's in good order? Wonder if the expected JTAC is part of this recruitment drive?

Rendition! [n. rendering, performance, interpretation]

Whilst we talk about MI5 we received an interesting email highlighting the US Rendition flights [which Britain could never be part of ;)]. The URL for this BBC Newspiece is: http://news.bbc.co.uk/go/em/fr/-/2/hi/uk_news/politics/4851478.stm

The headline 'MI5 enabled UK pair's 'rendition'' followed by the strapline, 'Telegrams sent by the British security service led to the "extraordinary rendition" of the two UK residents now in Guantanamo Bay. It's an interesting read especially when you learn that those banged up are an Iraqi citizen with UK residency who claims his link with Abu Qatada was expressly approved and encouraged by British Intelligence and the other is a Jordanian refugee who had been living in North West London.. It's an interesting read.

UK TOP SECRET STRAP 2 UK/US EYES ONLY JOINT INTELLIGENCE COMMITTEE ASSESSMENT:

International Terrorism: Impact of Iraq

So began a piece on the front page of the Sunday Times of 02/04. Did you know, and this may well be a difficult question because its from a 'leaked top-secret memo from the JIC' that the war in Iraq has made Britian the target of a terror campaign by al-Qaeda that will 'last for many years to come'. Apparently Tony Bliar didn't and had to be warned by the Spy Chiefs. The article, by David Leppard, also points out that for the bombings on 7th July Mr Bliar blamed an "evil ideology", not the war, for motivating the suicide bombers.

What caused some discussion is that Bliar has to be appraised of this situation when the rest of this over-taxed and very pc and thought controlled Nation already knew it.

Army Spy Payout

Page 62 of NL32 carried this piece:

'Spy' claims sex hell

The Sun newspaper carried a story on 09/11 [ninth of November to the yanks] penned by Virginia Wheeler and entitled 'Spy Girl claims sex hell'. PLondon had previously received an email from AnonNI giving a URL that took him to the BBC News site and the same story:

< http://news.bbc.co.uk/1/hi/uk/4413620.stm> and a chance chat with DoK about oversleeping and missing the 0340z alternate Wed sending brought in the mention of the Det and all things Miss Mates!

The early BBC piece mentions in one paragraph, 'Cpl Mates, who earns £27,000, is retiring from the 14 Intelligence Company, part of the Special Reconnaissance Regiment.

The reason for Miss Mates action is apparently due to the years of degrading abuse – if she wins – it will cost the MoD only £686,000. These complaints go right back to the time when Miss Mates joined the army, ten years ago [Sept 1995]. Miss Mates is 30 years old and is retiring from the Special Reconnaissance Regt. This regiment is known as the 'Det'.

A collection of articles on Miss Mates apparent ordeals – all sexually motivated - are covered in a variety of newspapers.

However the Sun makes this claim, "Two years later she joined 14 Intelligence Company, the special section known as 'The Det'"

Brazillian Jean Charles Menenzes. [As we previously stated police are not armed with automatic weapons -- now they claim dum-dum bullets used – or, to be accurate, 'hollow point shot'- and who really gives a toss]?

In continuation a male colleague later claimed that Miss Mates was the 'victim of schoolboy pranks.'

E sent an interesting cutting from a British newspaper, Daily Telegraph that featured a piece entitled, 'Army reveals secret elite unit that puts women on the front line.'

An interesting article indeed as it itemises a different area where the Special Reconnaissance Regiment has excelled, the training and selection and who else they work for. [tnx E].

On 5th April 2006 p13 Metro Newspaper fielded the headline, '£12000 for Army spy in sex case,' whilst the Daily Express Page 5 offered, 'Payout for lesbian jibe Army spy.'

We will not detail the claims here but suffice it to say that Miss Mates suffered a catalogue of abuse that accounted for her 43 allegations. Of these 43 only 12 were proven but compensation awarded on only six. The total amount was £12000, well short of the £686,000 originally demanded. At the hearing she was told that special forces "are even more prejudiced against women than the mainstream Army." She was, apparently, passed over in favour of less talented men [that's a trait of all services – you don't even need to be a soldier to encounter that – according to a mate of KW the [MSC is rife with it – only those who burn the seat they sit on get promotion, irrespective of ability]. AnonNI kindly sent in the following link: http://news.bbc.co.uk/1/hi/uk/4877190.stm

And remarked, "I have to say that the following has been the subject of much laughter, and as such I must nominate it as 'Quote of the Week' "Another successful compensation claim was for a colleague attempting to prevent Cpl Mates from attending a rounders [also known as Baseball in America] competition." Followed a close second by; "The final successful claim was that female toilets used by Cpl Mates had had cling film placed over them."

I really don't know what to make of the above.....sounds more like the charge sheet of a grammar school detention, rather than proceedings taking place in a courtroom. I wonder is she looks just so smug now, having only got £12k compensation in respect of a number of claims, rather than the original £686k that she was claiming in respect of forty-three separate claims. What is the world coming to? [Tnx AnonNI]

"Spymaster Require"

So there I was sitting at my desk on Tuesday 11th April, 2006 with a cup of black tea when I opened the Metro free paper. Page 44 secretarial jobs section had the usual ads, but one stuck out above the others. I had actually seen the email address, 'lee@spymaster.co.uk' and my mind went straight toLee Tracey, a former eavesdropper for MI6, and development engineer who developed a system I can't remember the name of!! Converting the email addy to:

http://www.spymaster.co.uk/ I took a look at the very professional site. The online catalogue is also interesting. Those without PC can send for one but it will cost you 40 quid for the pleasure.

I recall that Lee Tracey also featured in a past Wireless World but again I cannot remember the date, mid to late 1980s. Anyway, if you are a cheerful, non-smoking/secretary/receptionist who wants to work in SpymastersW1 showroom with 3 weeks hols per annum you can expect £20k

Putin abolishes spy agency prisons

Moscow, Apr 17: Russian President Vladimir Putin today abolished the high-security prisons of the country's powerful counter-espionage agency Federalnaya Sluzhba Bezopastnosti (FSB), used mainly for pre-trial detentions.

The FSB -- one of several successors of the Soviet KGB -- is involved in counter-espionage and anti-terror operations, and is reported to have a number of prisons including infamous high-security Lefortovo Jail where foreign spies and prominent Chechen terror leaders were confined after arrest.

Putin signed into law his decree making FSB detention centres part of the country's penitentiary system, administered by the Justice Ministry, a Kremlin press release said here.

The law now prohibits the use of these prisons for holding individuals accused or suspected of committing crimes whose investigation falls within the purview of FSB.

The move is designed to ensure the rights, freedoms and legitimate interests of suspects and prisoners in line with recommendations from the parliamentary assembly of the Council of Europe (Pace) and falls and Russia's obligations under 1996 accession to the council, the release said. Bureau Report http://www.zeenews.com/znnew/articles.asp?aid=289018&sid=WOR [Via JMM – thanks]!

Political Rhetoric and fun in the NL

A couple of our readers contacted KW to berate him over his waggish treatment of Tony Blair – that is why this issue is virtually free from his verbal spankings of HMG.

Well old Ken has missed his chance this time – Party Political Broadcast on behalf of the Labour Party broadcast in UK 1855 18/04, so we'll do it for him:

The missed PPB can be seen on <u>http://www.davethechameleon.com/video/web/dave-the-chameleon-xl.mov</u>

Far from telling the viewers what Labour has in store for us in its local election mandate [we all know it's much of the same – strip us of money, give it to illegal immigrants and ruin the NHS and a bit of easily forgiven sleaze on the side] it represented the leader of the Conservative Party [Tories for non-Brits] as a Chameleon riding a bike. They attempted to suggest that David Cameron changes his political views depending on his needs to reach the people.

The PPB actually achieved two things; one being an adverts for the film maker who did the very clever work, the other being to vote for any party but Labour.

If David Cameron does change his colours to suit it's better than lying, surely. The local elections are due on 4th May and the buzz in the media is that a huge portion of the vote will be given to the extreme right wing BNP because of Blair's poor stewardship of this Country. The fact is that many will vote for the extremists not because of Blair's poor leadership but because they are pissed off with being treated as second rate citizens who are, in effect, cash cows for Labour. The illegals in the country get all, unmarried mothers get all, skivers get all and the elderly who have contributed all their lives have to exist on subsistence pensions because they should have saved [in the worlds most taxed country].

My father, an 86yo veteran of Burma, looks out of his window and wants to know why he was forced to fight in WW2 and what really came out of it. It was, he says, not worth the lives of decent youngsters to have to live in a country where there is no respect and where the the fat of the land is shucked out to those who have never contributed. Criminals are no longer punished correctly, shootings and street robbery are common. You can't get treatment in hospitals because the wards have 'mature students' all suffering HiV, TB and suchlike. It is, of course, their Human Right to get treatment – but what about those of us who work to pay for this lot? Yours truly had a growth removed that demanded immediate treatment – I waited 4 months for that and was told by the surgeon that it was not benign.

Blair slagged off Cameron for no reason other than to ridicule the man and his party; perhaps he should look round and see the absolute crap of a country he has created. "Tough on Crime, Tough on the causes of Crime." Tell that to the mother who goes to visit her son in the morgue full of shot from a converted Brocock; because no else believes it either. Mr Cameron will not need to reply to the slur placed upon him because Blair has done it himself.

So far Mr Cameron has not said much; what he has said is common sense though - 'Vote for anyone but the BNP.'

But what if the BNP do get into a plethora of Councils - especially the labour controlled ones - what will happen then?

Not a humorous account as KW would do it - perhaps a little bitter too - but all true from the eyes of the working classes of Britain.

The Joint Special Forces Support Group

Britain to double commitment to the war on terror with 'SAS Lite'

By Sean Rayment, Defence Correspondent

April 2005

A new elite fighting force is to be created that will enable the Special Air Service to double the number of military operations against terrorist organisations around the world.

The creation of the unit, to be called the Joint Special Forces Support Group, will mean that Britain's special forces will grow to more than 2,000, their largest number since the Second World War, most of whom will be committed to fighting terrorism within the United Kingdom and abroad. The 650-man unit will be composed mainly of paratroopers, who have a proven track record of working alongside the SAS, in addition to troops from the Royal Marines and the Royal Air Force Regiment.

Gen Sir Mike Jackson, the Chief of the General Staff, is understood to have told special forces commanders that the unit should be ready to conduct operations alongside the SAS by early 2008.

The Telegraph has learnt that defence chiefs want the SAS and its Royal Marine equivalent, the Special Boat Service, to be freed to return to their original role of staging special operations.

These would include long-range infiltration operations deep behind enemy lines, counter-insurgency ambushes, and the seizure of terrorist suspects in hostile countries. This would leave more conventional attacks, such as those carried out in the Afghanistan and Iraq wars, to the new unit. Senior officers within the special forces have long believed that the SAS should operate more like its original incarnation, the Special Operations Executive, which was formed in June 1940.

The SOE, composed of male and female agents specialising in sabotage, spying and assassination, was ordered by Winston Churchill to "set Europe ablaze". In Afghanistan during November 2001, the SAS was ordered to help to destroy al-Qaeda bases in the caves of the Tora Bora mountains, an operation that was described by the SAS squadron commander as a misappropriation of special forces.

The new unit will be commanded by a Parachute Regiment lieutenant colonel and will be based at St Athlan Barracks, in South Wales, close to the SAS headquarters in Hereford. The force will be composed of around 450 soldiers from the 1st Battalion of the Parachute Regiment and 200 members from the Royal Marines and the RAF Regiment.

Troops from across the Army will be invited to join the new unit, but those from outside the Parachute Regiment or the Royal Marines will have to pass rigorous tests in addition to the demanding Army parachute course.

While the Paras will supply the assault troops for military operations, it is understood that commanders are keen to exploit the special skills of the Royal Marines, such as maritime surveillance, and the RAF Regiment, who would secure landing sites and airfields.

The possibility of a new unit was first discussed last year during the controversial restructuring of the infantry, which saw the demise of three infantry battalions.

Gen Jackson convinced Geoff Hoon, the Secretary of State for Defence, of the need for a so-called "Ranger" battalion - based on the United States Rangers - to work alongside the SAS, and the general was effectively able to reduce the number of battalions facing the axe from four to three. The Parachute Regiment had previously demonstrated its expertise in working alongside the SAS in September 2000, when 110 members of the regiment helped in the rescue of 11 British soldiers who had been kidnapped by the West Side Boys, a Sierra Leone guerrilla organisation. The mission was a success, although one member of the SAS was killed and several Paras were injured.

A senior Army officer described the creation of the force as a "welcome move which has been a long time in coming".

H said: "You could describe the new unit as SAS Lite. Soldiers wishing to become part of it will have to offer much more than the average infantryman but the entrance requirements will not be as demanding as those required by the SAS."

[Believed to have appeared in the Daily Telegraph but this taken from 'SkyscraperCityForums' and posted by 'Arthur Dent'] *The Metro 21/04 page 2: Elite Unit Confirmed*

Defence chiefs yesterday confirmed the creation of an elite unit to support Britain's special forces and strengthen anti-terror operations. The Special Forces Support Group, including Royal Marine commandos, army paratroopers and RAF freefall experts based at St Athan barracks Cardiff Wales, will support the SAS and Special Boat Service in battle and help police dealing with terror attacks. The Unit came into operation on April 3 but its existence was confirmed by Defence Secretary John Reid only yesterday [20/04] Written Ministerial Statement: Secretary of State for Defence Dr John Paid

Written Ministerial Statement: Secretary of State for Defence Dr John Reid

Special Forces Support Unit

The Secretary of State for Defence (Dr John Reid): On 16 December 2004 (Official Report, column 1798), as part of the wider programme to modernise the UK's defence capabilities, the then Secretary of State for Defence, the rt hon Geoff Hoon MP, announced to the House the Government's intention to create two new units that would significantly improve the specialist support to the Special Forces and enhance our global capacity to fight terrorism.

The first of these new units, the Special Reconnaissance Regiment, became operational in April 2005 and is already delivering a globally deployable special reconnaissance capability to the UK Special Forces.

The second new unit is the 'Special Forces Support Group'. SFSG is an enhanced capability that will directly support UK Special Forces intervention operations around the world and will provide the UK with an additional counter-terrorist capability.

I am pleased to be able to inform the House today that the SFSG has now stood up in St Athan, near Cardiff, and achieved Initial Operating Capability as planned on 3 April.

Personnel for the new unit have been drawn from the Parachute Regiment, the Royal Marines, and the Royal Air Force Regiment. The unit will be part of the UK Special Forces Group.

The principal role of the SFSG is to provide direct support to UKSF intervention operations, as well as reinforcing UKSF in other key capability areas such as provision of specialist training and support to domestic CT operations. It will have a specific specialist infantry role and personnel will be equipped and trained accordingly.

No place for the 'Det' then?

Then we have:

MoD to fight terror - Bond-style

By Sean O'Neill

Like Q-branch in the films, a new centre will develop hi-tech gadgets to help thwart extremists

AN ELITE squad of scientists — the real-life equivalent of James Bond's Q Branch — has been enlisted as Britain's latest force in the fight against international terrorism.

The team of experts, which will operate from a new laboratory at the Ministry of Defence's secret research centre at Porton Down, Wiltshire, will develop gadgetry and weaponry to counter the terrorist threat.

The 15 key experts who will initially staff the Counter-Terrorism Science and Technology Centre will co-ordinate Britain's scientific response to attacks such as the July 7 bombings.

Their inventions may not quite be in the fantastical realms of 007's weapon-packed watches and bizarrely armed Aston Martins, but they will draw on the latest research and experimentation to provide technological answers to terrorism.

The MoD said that the new science centre — which will be officially opened today by John Reid, the Defence Secretary— will be a one-stop shop for all government agencies dealing with terrorist incidents.

The scientists will seek to develop new methods of detecting the presence of explosives, to improve the chances of identifying a suicide bomber before he or she has had the opportunity to carry out an attack.

They will focus strongly on the detection and defusing of the roadside bombs and improvised explosive devices used against British troops by al-Qaeda insurgents in Iraq and Taleban forces in Afghanistan.

The laboratory will be able to tap into the research going on outside government into developing ultra-sensitive and highly portable equipment for identifying traces of chemical or biological agents in the air. Remote-controlled chemical agent detectors are also likely to be developed. Major exercises have been conducted to rehearse the emergency response to a dirty bomb attack, and counter-terrorism agencies claim to have thwar-ted at least two attempts by Islamist extremists to mount chemical attacks in Britain.

"Terrorism is a real threat to us all and we must do everything we can to ensure the UK is best equipped to deal with any incident both at home and wherever our Armed Forces deploy," Mr Reid said yesterday.

"This new centre will provide a world-class hub to ensure government laboratories, industry and academia are used as efficiently as possible to keep one step ahead of evolving terrorist threats."

Ken Brigden, the director of the centre and the man who may come to be known as Q, said: "This centre will be staffed by the very best MoD, academic and industry counter-terrorist technical experts with cutting edge expertise in chemical, biological, radiological, nuclear and explosive threats.

"Terrorist threats evolve rapidly so the centre will respond, not just to current threats but also anticipate threats as they emerge and develop." The creation of the centre was welcomed by Lord Rees of Ludlow, the president of the Royal Society. He said: "The new centre should clearly identify sources of expertise and this co-ordinated approach should help to prevent the duplication of scientific research and ensure efficient use of funds."

Lord Rees also called on the MoD to ensure that the benefits of the centre's work were made available to all of those involved in the fight against terrorism.

SECRET WEAPONS

Q branch in the James Bond films is headed by Major Boothroyd — MI6 codename Q

The part of Q was played from 1963 to 1999 by Desmond Llewelyn; John Cleese took over after his death

Bond's first hi-tech gadget was a briefcase fitted with a teargas dispenser, rifle and knives

The new Porton Down laboratory will be staffed by experts now working in the Defence, Science and Technology Laboratory and the Atomic Weapons Establishment

Where are they now? [Katherine Gun - ex GCHQ something or the other]

Katharine Gun was a translator at the Britain's communications spy agency, General Communications Headquarters. In 2002, she leaked a top-secret memo to a British newspaper, revealing the U.S. was spying on U.N. Security Council members before their vote on the Iraq war.

Read her latest here - URL thanks to AnonNI who declared, 'Paragraph 6.....she really is naughty, isn't she?!' [*I totally agree with you there – bet she'll be under surveillance for writing that, at least*]. http://www.tompaine.com/articles/2006/03/20/iran_time_to_leak.php

HJH E2K WATCH.

HELP SOLVE THE "ENIGMA!"

What an opportunity, thought this tired old author, as, out of the midnight VDU popped the following gem. An offer too good for any red-blooded aficionado of a NL named ENIGMA to decline (or refuse, for that matter!) There is, it seems, a project in progress to decipher one of the last unbroken ENIGMA 2000 encrypted messages transmitted in the last war. (You know, 1939-45, the war that popped up after the war to end ALL wars!) Four only exist at the time of writing this, (040306) so hurry along to your local decrypt comms bunker and get hacking. But, you'll need to rush, 'cos the old workstation has just told me that one has just succumbed. That's right, folks, only three left!

The project is named the M4 project. It is so named, it is thought, because these messages were generated on a four rotor machine.(Back of the class all those who thought it was a jigsaw for long motorway journeys.) Computer users who wish to become involved will be contributing their computer time and memory capacity in a similar fashion to those taking part in the SETI project. (You know guys, lil' green men R'us!) The project address is (<u>http://www.bytereef.orgnyud.net:8080/M4-project.html</u>) The help of computer users is sought to crack the last of these messages. HJH has offered his trusty vintage Sinclair Spectrum, but, as this is a family show, will not repeat the reply he received! HJH (With grateful to thanks to John Leyden of the "REGISTER".

1984 RE-VISITED!

The author has suddenly realised, having just read in "THE REGISTER", which is a first rate on line source of current developments in the cyber world in which most of us spend large chunks of our time. (Well, it IS cheaper than the pub!) that all is not as well as the sultans of spin would have us believe. A couple of snippets-----"Vehicle license data to be held for 2 years" And "UK Number plate cameras go national". And, of course, what could be complete without "GATSO 2 the UKs very own 24x7 vehicle movement database begins." Is it just THIS author, or is anyone else out there becoming a little bit scared? GATSO 2 (Son of Gatso is a bit more user friendly even if it IS Big Brother!) is a database capable of logging all traffic.

on Britain's roads and retaining this data for 2 years. This information was given to the SUNDAY TIMES by a member of the Association of Chief Police Officers (ACPO)

Using Automatic Vehicle Number Recognition, or ANPR, this system will be run from Hendon, which, being home to the PNC (Police National Computer) seems only fair.

After all, these things might get lonely (Can computers become gregarious?)

So what does it do, and why should we worry? It merges existing CCTV, ANPR, and Speedcam systems and databases. And THAT, my friends, is a LOT of surveillance.

The lately departed communist leaders of the now defunct Warsaw Pact nations would have given their collective genitalia for such a surveillance tool. (No pun intended!)

Time on line is given as April 2007 (Wanna bet it's not April first?) Come 2008, this system is estimated to be capable of processing 50,000,000 number plates PER DAY!

Fixed ANPR cameras already are in place at "strategic locations" on every major motorway in UK. (Source, John Dean, ACPO coordinator for ANPR.) The M42 will be used as a trial area for speed limit enforcement, and then will follow" more serious crime " (Their italics, not this authors) Coming in on the inside track we have our old friends the DVLA with a database linked to ALL MOT testing centres, and which can be linked in to this surveillance network. So, the motorists of our nation would appear to be stitched up like the proverbial bespoke suit! (Not that this author can afford one of THOSE!)

All this of course, depends upon the majority of us continuing to be law abiding and registering our vehicles as and when we buy them. This will mean that the law abiding will be the ONLY ones to be hit. Having been one of Britain's "Thin Blue Line" this author can see horrendous enforcement problems. More and more people will not register their vehicles or use false names and addresses. Another question is how will the system cope with the ever increasing number of foreign vehicles on our groaning roads? Easy! Ignore the difficult, and penalise the easy targets. Ask any CSA worker. (And I don't mean Confederate States of America!)

Which brings me back to the title. As a keen fan of the book 1984, which must rank as a classic, this author sees many similarities jumping out of the woodwork. In the book, the war, which is used to unite a down trodden nation, has gone on for so long no one remembers peace. Ring bells? Population surveillance, via CCTV and other modes, is 24 hours, 7 days a week.(Here, in UK, the same can be said of us. CCTV coverage is now so total, that informed observers have stated that we are the most monitored population in Europe. The author is a civil servant working in a government building. The CCTV coverage, both internal and external, is extensive. The total number of cameras is in three figures!) Pornography, sex, and alcohol and drug abuse are encouraged as a sop to the masses. (Freely available cannabis and other drugs, 24 hour drinking, licensed brothels in certain UK towns, and TV porn channels and magazines ring any bells here guys?) For those amongst us with rose tinted bi- focals, the sentences in brackets are the way things REALLY are in this "home fit for heroes" Well, this author sure ain't no prude, but enough is enough. Let us close with a quote from 1984." Power is a boot kicking a human face forever. That, Mr. Smith, is power." Strange to reflect that most of this has come about under our leader (1984 again!) Bliar (Sorry, Blair, another typo!) And the author of 1984? Easy, I hear you cry, George Orwell. Correct! And George Orwell's real name? Yes folks, you guessed it, Eric BLAIR! Frighten you? It sure does me! HJH.

ASSISTANCE REQUESTED on this FCO Clandestine Communications and Propaganda Radio site:

It is believed that <u>Rendcomb</u>, 5 miles north of Cirencester in Gloucestershire was a wartime FCO Clandestine Communications and Propaganda Radio site.(may not have been used since late 1940's or early 1950's). There is little detail available about the use of this site and whilst we have ascertained there was an airstip there, little else can be uncovered.

It has been mentioned to us that apart from propaganda the base [if it existed] was also used as a DWS site. We would be pleased to receive any thoughts/information on this past site via g7vak@yahoo.co.uk or direct to Paul at his home address [See QRZ or Monitoring Monthly: Feb, Mar, or May 06].

ASSISTANCE REQUESTED by ENIGMA 2000 Member ACy

I am interested in Chapman Pincher's article appeared in the Daily Express on 12. January about Sonia, the well known russian agent first in China, then in Switzerland as the resident of the pre-war spy network, which later grown in to the Rote Drei during the 2nd WW

We would be pleased to receive any scans of this piece OR OTHER INFO ON SONIA via g7vak@yahoo.co.uk

OPERATION JALLAA: Input [3] noted – thanks. Output [1] given.

Thanks for your letters E

^ Some German numerals have a radio accent. The numbers in question are:

 $2\,$ ZWEI pronounced by some TXs, as TSWO .

5 FUNF some pronounce it as FUNUF.

9 NEUN pronounced by some as NEUGEN.

This is totally in keeping with some German armed forces stations and corresponds to our WUN, FOWER, FIFE, NINER

Arabic Numerals [E25 and V08]

| English | zero | one | two | three | four | five | six | seven | eight | nine |
|---------|------|-------|--------|--------|------|--------|-------|-------|---------|-------|
| | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| Arabic | sifr | wahid | itnien | talata | arba | khamsa | sitta | saba | tamanya | tissa |

Numeral systems used on selected Slavic Stations

| | S04* | S11 Presta | S11a Cherta | S10d | S17c |
|---|-----------|---------------|-------------|--------|--------|
| 0 | nuar | zero | nul | Nula* | Nula* |
| 1 | edna | yezinka | adinka | Jeden^ | Jeden^ |
| 2 | dvoytze | dvonta | dvoyka | dva | dva |
| 3 | tri | troika | troyka | tri ' | tri ' |
| 4 | chetyri | chidiri | chetyorka | shytri | shytri |
| 5 | pedartze | peyonta | petyorka | pyet | pyet |
| 6 | shest | shes | shest | shest | shest |
| 7 | sednitzer | sedm | syem | sedoom | sedoom |
| 8 | asem | osem | vosyem | Osoom~ | Osoom~ |
| 9 | devet | prunka | dyevyet | devyet | devyet |

Notes:

* Nula heard as nul

- A Jeden heard as yedinar
 Tri heard as 'she'
 Osoom often heard as bosoom or vosoom.

| The figure 8 Osen Sounds like Arthur The figure 9 Devet Sounds like David. | * <u>For S04:</u> | 6 |

<u>Current Cuban Skeds Heard From 0000-0700 UTC</u> <u>This covers 1900-0200 local EDT in the USA</u>

Notes:

V2a skeds are indicated in italic fonts.

M8a skeds are indicated in normal fonts.

The primary or first sked is indicated with (P). The secondary, second or repeat sked is indicated with (S). All skeds normally begin on the hour.

Frequencies listed as (), denote primary or secondary sked not determined.

Frequencies listed without (), denotes a possible sked.

Hidden away on page 24 of The Times [dtd 27/04/2006] was an interesting article entitled 'Secret Service breaks cover to advertise for spooks.

This most interesting piece penned by the Defence Editor, Michael Evans, stated that in the 97 year history of Britain's SIS aka MI6 this was the first time that they were 'blowing its cover and trawling openly for recruits.' The advert appeared on page 3 of The Times' Career inset.

The writer suggests that a golden mosque features prominently in the row of photographs used in the advert 'to remind would be recruits that these days many key operational posts are in Islamic countries.' E2k hopes that any subsequently interviewed hopeful doesn't go to his location for interview armed with that knowledge because it was not a 'golden mosque' roof, minaret or whatever. What it appears to be is a gold laid dome [with decorative crucifix above] so commonly seen on Russian architecturually influenced religious buildings. The advert does give a flavour of a world reaching organisation though. One image is that of a hooded man with a rifle, typically an AK-47 it could well be the Romanian version looking at the gas block/tube and the upper and lower hand guards. Whilst the front sight block is not seen the rear sight and block is visible as is the front sling swivel [except it don't swivel]! Another image that looks remarkably like one from a certain GCHQ booklet, features in part a cassegrain dish. The ad asks for : Administration, Operational Officers, Operational Analysts, Linguists, Technology and directs the hopeful applicants to a URL after declaring,

"We operate around the world to make this country safer and more prosperous. As you can imagine, it's no easy task. So whether we need a thoroughly efficient administrator or an overseas operator in the field, we hire people we can depend on because everyone in the UK depends on them. For more details about joining Britain's secret intelligence service, go to www.********.gov.uk"

[Taken from The Times 'Careers' Page 3 27/04/06]

Full article can be read: http://www.timesonline.co.uk/article/0,,2-2153344,00.html

This advertisement and associated blurb can br seen on the MI6 website.

Here's a link to a Numbers Clip produced in the US for KUTV :
